Substance Abuse And Psychopathology:

Substance Abuse and Psychopathology Arthur Alterman, 1985-06-01 Substance misuse and abuse exist in almost every human society. In our western civilization the bulk of attention has focused on those individuals who specifically seek treatment or those who have become so disabled by these problems that they require treatment. These individuals usually qualify for a psychiatric diagnosis of alcohol or other substance abuse. However, just as it has been recognized that primary substance abuse is frequently associated with other diagnosable psychiatric disorders such as sociopathy or attention deficit disorder residual type and that the origins of substance abuse are multivariate, we have also begun to become aware that many other individuals in our society with psychiatric or other problems also suffer to varying degrees from substance abuse. These problems may be considered secondary by various specialists or treatment personnel but nevertheless they are problems and what disorder is primary or secondary in a given individual may often be very difficult to determine in a meaningful fashion. Thus within the past decade research studies have reported significant incidences of substance abuse or misuse in high school and college aged populations, in medical populations and in individuals with other psychiatric disorders such as schizophrenia, depression and the anxiety and personality disorders. Yet to date little has been done to bring together and systematize this widely scattered data that describes the presence of substance abuse problems in various populations.

Psychopathology: Substance Related and Impulse Control Disorders Gary Elliott, 2014-06-24 Seminar paper from the year 2013 in the subject Psychology Clinic and Health Psychology Abnormal Psychology Atlantic International University language English abstract The drugs mentioned in this paper each have their own specific effects on the user but they are similar in the manner in which they are used and the treatment used when working with the abuser A substance is a chemical compound that alters behaviour or mood when ingested This group includes alcohol nicotine caffeine heroin and cocaine along with chocolate and soft drinks The vast majority of users of the safe drugs are not perceived as addicts they can be equally as addictive and harmful to one's health There is a clear distinction between a user and an abuser of drugs Substance use suggests that the individual ingests the drug in moderate amounts that have no significant effect on their social educational or occupational functionality The drug has the ability based on the quantity ingested to create impaired judgement mood changes and lowered motor ability this result is referred to as intoxication Substance abuse as an extension of use is really defined on how the use of the drug affects the individual's relationships his work or education and whether it causes him to place himself or others in physically dangerous situations Barlow Durand 2005 Drug dependence is often described as addiction There is however some disagreement in how we best define substance dependence Woody Cacciola 1997 One definition would explain how the individual requires systematically greater quantities of the drug to experience the same level of intoxication tolerance and will behave negatively if the drug is not ingested withdrawal Franklin Frances 1999 An alternate view on substance dependence pertains to the behaviour that focuses on finding the required drug as a dependence indicator A different view of substance dependence focuses on the drug seeking behaviour

will occur until there is a thorough understanding of the behavioral disorders The purpose of the present project was to devise a handbook that covered both general and specific topics in psychopathology and that would be useful to researchers practitioners and graduate or other advanced students in the mental health professions In order to implement this plan we selected very carefully colleagues whom we respect for their expertise in particular fields These include both clinicians and researchers with outstanding national reputations as well as more junior behavioral scientists and clinicians who in our opinion will achieve similar recognition in the future The chapters in this book lead us to believe that we have chosen wisely We would like to express our appreciation to these authors for their outstanding contributions and cooperation

Substance Abuse as Symptom Louis S. Berger, 2013-05-13 What can psychoanalysis contribute to an understanding of the etiology treatment and prevention of substance abuse Here Louis Berger contests both the orthodox view of substance abuse as a disease explicable within the medical model and the fashionable dissenting view that substance abuse is a habit controllable through the willpower fostered by superficial treatment approaches According to Berger substance abuse is first and foremost a symptom He argues that it is only by grasping this fact that we can understand why standard approaches to treatment and prevention have failed Berger invokes a wide spectrum of recent analytic insights about infant and child development the psychology of narcissism and primitive character disorders in making the case that substance abuse masks serious preoedipal or midrange psychopathology Such psychopathology operating at both cultural and person levels explains why certain individuals become dependent on illicit drugs it is equally revelatory of why the substance abuse establishment and society at large continues to misconstrue the nature of the problem and to proffer ill conceived and ineffective remedies After thoroughly examining the motives conscious and unconscious that maintain mainstream myths about substance abuse Berger points the way to alternative approaches to prevention and treatment
