Rhetoric and the Arts of Design David S. Kaufer, Brian S. Butler, 2013-11-26 The design arts from the design of buildings and machines to software and interfaces are associated with types of knowledge and performance thought to be structured modular and systematic Such arts have become increasingly prestigious in our technocratic society Since Aristotle the art of rhetoric was conceived as a loosely structured practical art thought to be limited in the extent to which it could mimic more precise subject matters The art of rhetoric has been controversial since classical times but its status has sunk even lower since the industrial revolution a point when civic cultures began to cede authority and control to the cultures of specialized experts Many sympathizers of rhetoric have resisted its decline by calling for a civic art of public discourse to

stand in opposition to a technocratic specialized discourse that has come increasingly to disenfranchise the ordinary citizen. This is the first book to question the rhetoric technical knowledge split from a more fundamental perspective. To get some perspective on what is at stake in rhetoric's traditional classification as a practical art, the authors explore the distinction between practical and design arts, enumerate the various criteria cited in the literature for qualifying a cluster of knowledge and performative skills to count as an art of design, show how the knowledge and performative skills associated with the art of rhetoric meet the major requirements of design knowledge, propose a general architecture of rhetorical design, one descriptive both of civic address and specialized academic argument, turn to the Lincoln-Douglas debates to embody and provide some empirical support and illustration for their architecture, demonstrate how Lincoln and Douglas can be thought of as expert designers whose rhetoric is highly structured and modular, and explain how the rhetoric of both rhetorical agents can be represented in the layers and modules that one needs to display plans for buildings, software, or other design artifacts. These layers and modules are not just post hoc annotations of the debates; they also illuminate new and systematic ways for viewing the debates and, by implication, other specimens of rhetoric in terms of strategies of artistic production. Kaufer and Butler conclude their presentation by citing some of the research and educational implications that follow from housing rhetoric within the family of design arts.

**Maturing Megacities** Uwe Altröck, Sonia Schoon, 2013-08-19 This edited volume covers the multiple changes concerning urban governance in the course of the progressive transformation of the Pearl River Delta mega urban region in China. Looking at the megacities Guangzhou and Shenzhen, it analyzes the maturing of socio-economic, political, and spatial structures after the first waves of economic globalization, political transformation, and their rapid expansion and urbanization. The initial claim and starting point of the book is the existence of a profound multidimensional shift in the coastal mega urban region with a major tendency towards urban upgrading, economic restructuring, and a clearly observable consolidation of political institutions. For the first time since the beginning of the reform and opening up after 1978, this has led to a stronger bias toward urban regeneration and

adaptive re use of the building stock and an establishment of post industrial knowledge based creative industries The book investigates these changes as a set of mutually dependent developments that have to be understood and analyzed in connection with one another Thus the backgrounds and underlying forces that shape physical restructuring in the developed urban cores of the mega urban region and the ways in which the relevant actors and institutions are trying to both cope with and to influence each other are introduced here
