Sudden Death Of Athletes:

Sport-related sudden cardiac death Pietro Delise, Paolo Zeppilli, 2021-10-21 Sudden death in athletes is a global problem Although it is a relatively rare phenomenon 1 100 000 persons when it does occur it is often as an incomprehensible event In fact it strikes subjects who presumably should be much healthier than the general population In the previous 20 years many authors have studied this problem in an attempt to understand the causes and prevent these events and it has been determined that in the vast majority of cases athletes who die suddenly have an underlying heart disease arrhythmogenic cardiomyopathy hypertrophic cardiomyopathy coronary anomalies channelopathies etc In most cases these diseases do not produce major symptoms and do not preclude sports activity even at the highest levels although they do increase the incidence of sudden death How to discover these diseases in asymptomatic athletes is a hotly debated issue In particular there is controversy as to whether all athletes should undergo detailed medical screening including electrocardiogram or whether the costs of this screening are too high in relation to the event incidence The purpose of this book is to accurately analyze the causes of sudden death in athletes and to provide cardiologists and sports physicians with useful tips on how to identify at risk individuals Preventing Sudden Death in Sport and Physical Activity Douglas J. Casa, 2011-05-26

Arrhythmias and Sudden Death in Athletes Antonio Bayés de Luna, F. Furlanello, B.J. Maron, Douglas P. Zipes, 2013-06-29 Cardiovascular diseases are the most important causes of death in the world today In adults the most frequent heart disease is acute myocardial infarction which can lead to sudden death To prevent these diseases we need to fight against their main risk factors which include smoking lipid disorders hypertension diabetes and a sedentary life style among others It has been demonstrated that physical exercise or sports at any age provide notable benefits and can help to decrease other risk factors and reduce the incidence of cardiovascular diseases Exercise can be simply walking or cycling Aerobic exercise contributes to weight loss and also helps to control blood pressure cholesterol and diabetes It therefore plays an important role in prevention of heart diseases Sports for young people are of great value and advisable not only because they contribute to physical fitness but also because they help in psychological well being Young people should be encouraged to include general exercise and particularly sports into their daily activities The following points however should be kept in mind I Although winning at a sport is important this is only so if it is achieved in natural physical conditions and with the correct training Therefore it is advisable to keep well away from any type of activity which artificially increases physical performance that is drug taking *Sudden Death of Athletes* Ernst Jokl, 1985 *Preventing Sudden Death in Sport & Physical Activity* American College of Sports Medicine, 2016-03-14 *Preventing Sudden Death in Sport and Physical Activity* Second Edition examines the etiology prevention recognition treatment and return to play protocol of the common causes of sudden death in sport Chapters are written by content area experts offering a blend of clinical scientific and research expertise regarding each medical condition that is discussed **Sudden Cardiac Death in the Athlete** N. Estes,Deeb Salem,Paul Wang,1998-09-11 The unexpected death of an athlete during exercise is a tragic irony albeit with a history dating back to Pheldippides who collapsed after his original Marathon run We are more apt to consider vigorous exercise as a protective measure against cardiovascular events and not as a triggering mechanism for them The relative rarity of such episodes makes the screening of those at risk even more of a challenge This challenge is well met in this unique text the first to deal specifically authoritatively and comprehensively with the issues of prediction and prevention of sudden cardiac death in the athlete Many of the underlying cardiovascular diseases that put athletes at risk are identified and explained including hypertrophic cardiomyopathy arrhythmogenic right ventricular dysplasia Wolff Parkinson White Syndrome anomalous origin of the coronary arteries inherited long QT syndromes The screening guidelines are of particular value as are the recommendations regarding the participation of athletes with cardiovascular disease Beyond its clinical scope the editors have incorporated current information in epidemiology cardiovascular pathophysiology and the many vexing legal and ethical issues With its in depth multi faceted approach and prominent contributors Sudden Cardiac Death in the Athlete is sure to be a much welcomed reference for sports medicine and team physicians athletic directors and trainers family practitioners pediatricians and cardiologists
