Practical Innovation in Government Alan G Robinson, Dean M. Schroeder, 2022-07-19 This book is a comprehensive guide to an exciting new approach that managers at any level can use to transform their corners of government Whether people want more government or less everyone wants an efficient government Traditional thinking is that this requires a government to be run more like a business But a government is not a business and this approach merely replaces old problems with new ones In their six year five country study of seventy seven government organizations ranging from small

departments to entire states Alan Robinson and Dean Schroeder found that the predominant private sector approaches to improvement don't work well in the public sector while practices that are rare in the private sector prove highly effective The highest performers they studied had attained levels of efficiency that rivaled the best private sector companies Rather than management making the improvements as is the norm in the private sector these high performers focused on front line driven improvement where most of the change activity was led by supervisors and low level managers who unleashed the creativity and ideas of their employees to improve their operations bit by bit every day You'll discover how Denver's Department of Excise and Licenses reduced wait times from an hour and forty minutes to just seven minutes how the Washington State Patrol garage tripled its productivity and became a national benchmark how a K8 school in New Brunswick Canada boosted the percentage of students reading at the appropriate age level from 22 percent to 78 percent and much more

The most comprehensive textbook on the theory, research, and practice of child and adolescent therapy. *Child and Adolescent Therapy: Science and Art* is a unique textbook that introduces readers to all the major theoretical orientations: CBT, family systems, etc., and applies them to the common diagnostic categories: anxiety, disruptive behavior, etc. Rather than championing one therapeutic approach above the others, it identifies the strengths and applicability of each, with an emphasis on matching strategies to client needs and preferences. The central theme is the integration of outcome research and clinical reasoning to choose techniques and personalize counseling for each client. The vast literature on therapy outcomes is distilled into user-friendly summaries with clear conclusions and implications for treatment planning. The book models the thought processes of expert clinicians as they integrate theoretical principles, research findings, and observations of clients in real time to conceptualize cases, make clinical decisions, and decide what to say next. Theoretical concepts, empirically supported treatments, and best practices are translated into numerous examples of therapist statements and conversations between counselor and client. Unlike edited books with chapters by different authors, this work is an integrated whole with connections between chapters, a building block approach to learning, and unifying themes developed throughout the book. The Third Edition has been thoroughly updated to reflect current research and clinical advances. It features new material on the Internal Family Systems therapeutic model, modular psychotherapies, transdiagnostic approaches, head-to-head comparisons between empirically supported therapies. This textbook offers a thorough and practical introduction for graduate students in psychology, counseling, and social work. It also serves as a valuable resource for practicing mental health professionals who want to fill gaps in their knowledge, catch up with the outcome research, and learn new techniques. Purchasers get access to a companion website where they can download therapy handouts; instructors can also download teaching materials such as questions for discussion and exam questions. **Leading with Excellence** Barrett Williams, ChatGPT, 2025-01-24
