Technologies Of The Gendered Body Reading Cyborg Women:

Technologies of the Gendered Body Anne Marie Balsamo, 1996 This book looks at the representation of the body in culture from a feminist perspective Subjects covered include bodybuilding cosmetic surgery and cyberculture **The Gendered Cyborg** Fiona Hovenden, Linda Janes, Gill Kirkup, Kathryn Woodward, 2013-09-13 The Gendered Cyborg explores the relationship between representation technoscience and gender through the metaphor of the cyborg The contributors argue that the figure of the cyborg offers ways of thinking about the relationship between culture and technology people and machines which disrupt the power of science to enforce the categories through which we think about being human male and female Taking inspiration from Donna Haraway's groundbreaking Manifesto for Cyborgs the articles consider how the cyborg has been used in cultural representation from reproductive technology to sci fi and question whether the cyborg is as powerful a symbol as is often claimed The different sections of the reader explore the construction of gender categories through science the interaction of technoscience and gender in contemporary science fiction film such as Blade Runner and the Alien series debates around modern reproductive technology such as ultrasound scans and IVF assessing their benefits and constraints for women issues relating to artificial intelligence and the internet Technoscience in Contemporary Film Aylish Wood, 2002 This analysis of images of science and technology from popular films of the 1980s and 1990s argues that films as diverse as the science fiction film Jurassic Park contribute to popular understandings of science and technology

The Scientific Imaginary in Visual Culture Anneke Smelik, 2010 Popular media art and science are intricately interlinked in contemporary visual culture This book analyses the scientific imaginary that is the result of the profound effects of science upon the imagination and conversely of the imagination in and upon science As scientific developments in genetics occur and information technology and cybernetics open up new possibilities of intervention in human lives cultural theorists have explored the notion of the posthuman The Scientific Imaginary in Visual Culture analyses figurations of the posthuman in history and philosophy as well as in its utopian and dystopian forms in art and popular culture The authors thus address the blurring boundaries between art and science in diverse media like science fiction film futurist art video art and the new phenomenon of bio art In their evaluations of the scientific imaginary in visual culture the authors engage critically with current scientific and technological concerns Resilient Cyborgs Nelly Oudshoorn, 2020-04-02 This book examines how pacemakers and defibrillators participate in transforming life and death in high tech societies In both popular and medical accounts these internal devices are often portrayed as almost magical technologies Once implanted in bodies they do not require any user agency In this unique and timely book Nelly Oudshoorn argues that any discourse or policy assuming a passive role for people living with these implants silences the fact that keeping cyborg bodies alive involves their active engagement Pacemakers and defibrillators not only act as potentially life saving technologies but simultaneously transform the fragility of bodies by introducing new vulnerabilities Oudshoorn offers a fascinating examination of what it takes to

Brodwin, 2001-01-22 Essays on technology s effect on our relationship with our bodies A timely and perceptive look at some of the most anxiety producing issues of the day Paul Rabinow University of California Berkeley As birth illness and death increasingly come under technological control struggles arise over who should control the body and define its limits and capacities Biotechnologies turn the traditional facts of life into matters of expert judgment and partisan debate They blur the boundary separating people from machines male from female and nature from culture In these diverse ways they destroy the gold standard of the body formerly taken for granted Biotechnologies become a convenient tangible focus for political contests over the nuclear family legal and professional authority and relations between the sexes Medical interventions also transform intimate personal experience giving birth building new families and surviving serious illness now immerse us in a web of machines expert authority and electronic images We use and imagine the body in radically different ways and from these emerge new collective discourses of morality and personal identity This book brings together historians anthropologists cultural critics and feminists to examine the broad cultural effects of technologies such as surrogacy tissue culture research and medical imaging The moral anxieties raised by

biotechnologies and their circulation across class and national boundaries provide other interdisciplinary themes for discourse in these essays The authors favor complex social dramas of the refusal celebration or ambivalent acceptance of new medical procedures Eschewing polemics or pure theory contributors show how biotechnology collides with everyday life and reshapes the political and personal meanings of the body Contributors include Paul Brodwin Lisa Cartwright Thomas Csordas Gillian Goslinga Roy Deborah Grayson Donald Joralemon Hannah Landecker Thomas Laqueur Robert Nelson Susan Squier Janelle Taylor and Alice Wexler This impressive collection offers a number of rich examples of why the development of anthropological studies of science technology and their disruptive social effects is a leading edge of critical enquiry Arthur Kleinman Harvard University

Embodied Resistance Chris Bobel, Samantha Kwan, 2011 Ethnographies about transgressing social expectations of the body

Under Wraps Sharra L. Vostral, 2008-03-25 Menstruation provides one of the few shared bodily functions that most women will experience during their lifetimes Yet these experiences are anything but common In the United States for the better part of the twentieth century menstruation went hand in glove with menstrual hygiene But how and why did this occur This book looks at the social history of menstrual hygiene by examining it as a technology In doing so the lens of technology provides a way to think about menstrual artifacts how the artifacts are used and how women gained the knowledge and skills to use them As technological users women developed great savvy in manipulating belts pins and pads and using tampons to effectively mask their entire menstrual period This masking is a form of passing though it is not often thought of in that way By using a technology of passing a woman might pass temporarily as a non bleeder which could help her perform her work duties and not get fired or maintain social engagements like swimming at a summer party and not be marked as having her period How women use technologies of passing and the resulting politics of secrecy are a part of women s history that has remained under wraps

The Palgrave Handbook of Critical Menstruation Studies Chris Bobel, Inga T. Winkler, Breanne Fahs, Katie Ann Hasson, Elizabeth Arveda Kissling, Tomi-Ann Roberts, 2020-07-24 This open

access handbook the first of its kind provides a comprehensive and carefully curated multidisciplinary and genre spanning view of the state of the field of Critical Menstruation Studies opening up new directions in research and advocacy It is animated by the central question what new lines of inquiry are possible when we center our attention on menstrual health and politics across the life course The chapters diverse in content form and perspective establish Critical Menstruation Studies as a potent lens that reveals complicates and unpacks inequalities across biological social cultural and historical dimensions This handbook is an unmatched resource for researchers policy makers practitioners and activists new to and already familiar with the field as it rapidly develops and expands

Digital Fissures, 2022-11-21 From rethinking feminist archives to inserting postpornography in academia to approaching sex toys from a transpositive perspective to dismantling the foundations of techno capitalism the areas of inquiry in this book are lenses through which to explore the relationships between genders bodies and technologies All the various chapters work to reimagine the body as a hybrid malleable and subversive source of potentiality These essays offer readers road maps for unimagined and uncharted social scapes the relationship between bodies technologies genders means working within a space of monstrosity Through this embodied discomfort the book questions existing techno social norms and imagines tranfeminist futures Contributors are Carlotta Cossutta Valentina Greco Arianna Mainardi Stefania Voli Luc a Ega a Rojas Ludovico Virt Angela Balzano Obiezione Respinta Elisa Virgili Rachele Borghi and Diego Marchante Genderhacker

Cyborg Cinema and Contemporary Subjectivity S. Short, 2004-11-10 This book breaks new ground in providing an in depth critical assessment of cyborg cinema arguing that it remains one of the most intriguing and provocative cycles to have emerged in contemporary screen culture Tracing the cinematic cyborg s transition over the last two decades and evaluating the theoretical significance attributed to this figure it asks what relevance the cyborg continues to have in terms of understanding human identity our relationship to technology and to one another

Virtual Gender Alison Adam, Eileen Green, 2005-08-03 As yet there has been relatively little published on women s activities in relation to new digital technologies Virtual Gender brings together theoretical perspectives from feminist theory the sociology of technology and gender studies with well designed empirical studies to throw new light on the impact of ICTs on contemporary social life A line up of authors from around the world looks at the gender and technology issues related to leisure pleasure and consumption identity and self Their research is set against a backcloth of renewed interest in citizenship and ethics and how these concepts are recreated in an on line situation particularly in local settings With chapters on subjects ranging from gender switching on line computer games and cyberstalking to the use of the domestic telephone this stimulating collection challenges the stereotype of woman as a passive victim of technology It offers new ways of looking at the many dimensions in which ICTs can be said to be gendered and will be a rich resource for students and teachers in this expanding field of study

Devices & Desires Margarete Sandelowski, 2000 The author traces the relationship between nursing and technology from the 1870s to the present She argues that while technology has

helped shape and intensify persistent dilemmas in nursing it has also both advanced and impeded the development of the nursing profession
