Design-Based Concept Learning in Science and Technology Education Ineke Henze, Marc J. de Vries, 2021-02-22 Learning concepts is a real challenge for learners because of the abstract nature of concepts This holds particularly true for concepts in science and technology education where learning concepts by doing design activities is potentially a powerful way to overcome that learning barrier Much depends however on the role of the teacher Design Based Concept Learning in Science and Technology Education brings together contributions from researchers that have investigated what conditions need to be fulfilled to make design based education work The chapters contain studies from a variety of topics and concepts in science and technology education So far studies on design based learning have been published in a variety of journals but never before were the outcomes of those studies brought together in one volume Now an overview of insights about design based concept learning is presented with expectations about future directions and trends

debates of the 1990s this book is a must have for professionals in the field and can also be used as a textbook for graduate or advanced undergraduate courses The Design of Learning Experience Brad Hokanson, Gregory Clinton, Monica W.

Tracey, 2015-07-03 This book delves into two divergent yet parallel themes first is an examination of how educators can design the experiences of learning with a focus on the learner and the end results of education and second how educators learn to design educational products processes and experiences The book seeks to understand how to design how learning occurs both in the instructional design studio and as learning occurs throughout the world This will change the area s semantics at a deeper level it will change its orientation from instructors and information to learners and it will change how educators take advantage of new and old technologies This book is the result of a research symposium sponsored by the Association for Educational Communications and Technology AECT **Learning: Design, Engagement and Definition**

Brad Hokanson, Marisa Exter, Amy Grincewicz, Matthew Schmidt, Andrew A. Tawfik, 2022-01-01 This book examines the topic of learning design from a human interactive and collaborative perspective A variety of pedagogic and instructional modalities are thoroughly investigated as methodologies for creating functional and effective designs for students The book is appropriate for all levels of teaching and learning but special attention is paid to the special requirement of higher education graduate education and post graduate classrooms Within the research chapters are embedded numerous examples case studies and implementation guides The book is a scholarly yet practical guide to learning design and everyone from educational researchers in all areas of educational technology to instructional designers and instructional technologists will find it useful and inspiring at once Teaching as a Design Science Diana Laurillard, 2013-06-19 Teaching is changing It is

no longer simply about passing on knowledge to the next generation Teachers in the twenty first century in all educational sectors have to cope with an ever changing cultural and technological environment Teaching is now a design science Like other design professionals architects engineers programmers teachers have to work out creative and evidence based ways of improving what they do Yet teaching is not treated as a design profession Every day teachers design and test new ways of teaching using learning technology to help their students Sadly their discoveries often remain local By representing and communicating their best ideas as structured pedagogical patterns teachers could develop this vital professional knowledge collectively Teacher professional development has not embedded in the teacher s everyday role the idea that they could discover something worth communicating to other teachers or build on each others ideas Could the culture change From this unique perspective on the nature of teaching Diana Laurillard argues that a twenty first century education system needs teachers who work collaboratively to design effective and innovative teaching Learning Design Rob Koper, Colin Tattersall, 2005-02-18 E learning is still in its infancy This can be seen both in the limited pedagogical quality and lack of portability of e learning content and in the lack of user friendly tools to exploit the opportunities offered by current technologies To be successful e learning must offer effective and attractive courses and programmes to learners while at the

same time providing a pleasant and effective work environment for staff members who have the task to develop course materials plan the learning processes provide tutoring and assess performance To overcome these deficiencies the IMS Global Learning Consortium Inc released the Learning Design Specification in 2003 With Learning Design it is possible to develop and present advanced interoperable e learning courses embracing educational role and game playing methods problem based learning learning community approaches adaptivity and peer coaching and assessment methods In this handbook Koper and Tattersall have put together contributions from members of the Valkenburg Group consisting of 33 experts deeply involved in e learning and more specifically learning design The result is a rich and lasting source of information for both e learning course and tool developers providing information about the specification itself how to implement it in practice what tools to use and what pitfalls to avoid The book not only reports first experiences but also goes beyond the current state of the art by looking at future prospects and emerging applications

The Art & Science of Learning Design Marcelo Maina, Brock Craft, Yishay Mor, 2015-07-21 We live in an era defined by a wealth of open and readily available information and the accelerated evolution of social mobile and creative technologies The provision of knowledge once a primary role of educators is now devolved to an immense web of free and readily accessible sources Consequently educators need to redefine their role not just from sage on the stage to guide on the side but as more and more voices insist as designers for learning The call for such a repositioning of educators is heard from leaders in the field of technology enhanced learning TEL and resonates well with the growing culture of design based research in Education However it is still struggling to find a foothold in educational practice We contend that the root causes of this discrepancy are the lack of articulation of design practices and methods along with a shortage of tools and representations to support such practices a lack of a culture of teacher as designer among practitioners and insufficient theoretical development The Art and Science of Learning Design ASLD explores the frameworks methods and tools available for teachers technologists and researchers interested in designing for learning Learning Design theories arising from findings of research are explored drawing upon research and practitioner experiences It then surveys current trends in the practices methods and methodologies of Learning Design Highlighting the translation of theory into practice this book showcases some of the latest tools that support the learning design process itself

Handbook of Research in Educational Communications and Technology M. J. Bishop, Elizabeth Boling, Jan Elen, Vanessa Svihla, 2020-09-21 The 5th edition of the prestigious AECT Handbook continues previous efforts to reach outside the traditional instructional design and technology community to the learning sciences and computer information systems communities toward developing a conceptualization of the field However given the pervasive and increasingly complex role technology now plays in education since the 1st edition of the Handbook in 1996 the editors have reorganized the research chapters in this edition to focus on the learning problems we are trying to solve with educational technologies rather than to focus on the things we are using to solve those problems Additionally for the first time this edition of the Handbook reflects our field's growing understanding of the importance of design scholarship to inform practice by including design case chapters These changes for this edition of the Handbook are intended to bring educational technology research into the broader framework of educational research by elaborating on the role instructional design and technology plays as a scholarly discipline in addressing education's increasingly complex issues Provides comprehensive reviews of new developments in educational technology research and design practice Includes concrete examples to guide future research and practice in the ways emerging technologies can be used to solve educational problems Contains extensive references furnished to guide readers to the most recent research and design practice in the field of instructional design and technology
