Technology And The Contested Meanings Of Sustainability:

Technology and the Contested Meanings of Sustainability Aidan Davison, 2001-05-16 Argues that sustainability requires more than economic and technological efficiency

The Agrarian Vision Paul Thompson, 2010-07-30 As industry and technology proliferate in modern society sustainability has jumped to the forefront of contemporary political and environmental discussions The balance between progress and the earth's ability to provide for its inhabitants grows increasingly precarious as we attempt to achieve sustainable development In *The Agrarian Vision* Sustainability and Environmental Ethics Paul B Thompson articulates a new agrarian philosophy emphasizing the vital role of agrarianism in modern agricultural practices Thompson a highly regarded voice in environmental philosophy unites concepts of agrarian philosophy political theory and environmental ethics to illustrate the importance of creating and maintaining environmentally conscious communities Thompson describes the evolution of agrarian values in America following the path blazed by Thomas Jefferson John Steinbeck and Wendell Berry Providing a pragmatic approach to ecological responsibility and commitment *The Agrarian Vision* is a significant compelling argument for the practice of a reconfigured and expanded agrarianism in our efforts to support modern industrialized culture while also preserving the natural world

Water Societies and Technologies from the Past and Present Mark Altaweel, Yijie Zhuang, 2018-11-26 Today our societies face great challenges with water in terms of both quantity and quality but many of these challenges have already existed in the past Focusing on Asia *Water Societies and Technologies from the Past and Present* seeks to highlight the issues that emerge or re-emerge across different societies and periods and asks what they can tell us about water sustainability Incorporating cutting edge research and pioneering field surveys on past and present water management practices the interdisciplinary contributors together identify how societies managed water resource challenges and utilised water in ways that allowed them to evolve persist or drastically alter their environment The case studies from different periods ancient and modern and from different regions including Egypt Sri Lanka Cambodia Southwest United States the Indus Basin the Yangtze River the Mesopotamian floodplain the early Islamic city of Sultan Kala in Turkmenistan and ancient Korea offer crucial empirical data to readers interested in comparing the dynamics of water management practices across time and space and to those who wish to understand water related issues through conceptual and quantitative models of water use The case studies also challenge classical theories on water management and social evolution examine and establish the deep historical roots and ecological foundations of water sustainability issues and contribute new grounds for innovations in sustainable urban planning and ecological resilience

Belief-based Energy Technology Development in the United States Chi-Jen Yang, 2009 This book is a comparative study of two energy policies that illustrates how and why technical fixes in energy policy failed in the United States In the post WWII era the U S government forcefully and consistently endorsed the development of civilian nuclear power It adopted policies to establish the competitiveness of civilian nuclear power far

beyond what would have occurred under free market conditions Even though synthetic fuel was characterized by a similar level of economic potential and technical feasibility the policy approach toward synthetic fuel was sporadic and indeterminate The contrast between the unfaltering faith in nuclear power and the indeterminate attitude toward synthetic fuel raises many important questions The answers to these questions reveal provocative yet compelling insights into the policy making process The author argues that these diverging paths of development can be explained by exploring the dominant government ideology of the time or ideology of the state as the sociology literature describes it The forceful support for nuclear power was a result of a government preoccupied with fighting the Cold War The U S national security planners intentionally idealized and deified nuclear power to serve its Cold War psychological strategy These psychological maneuverings attached important symbolic meaning to nuclear power This symbolism in turn explains the society wide enthusiasm The fabricated myth of the Atomic Age became a self fulfilling prophecy and ushered in a bandwagon market On the other hand a confused indeterminate and relatively powerless welfare state stood behind synthetic fuel The different ideologies of the state explain the government s different attitudes toward nuclear and synfuel endeavors The overarching discovery is a mode of belief based decision making in long term energy planning This discovery goes against the prevalent assumption of rational choice in social sciences The author argues that rational choice assumption is inapplicable because of the extreme long term nature of energy planning It is not usually possible to predict the sociopolitical and economic conditions in the distant future Rational decisions require supporting information which often includes impossible long term foresights One cannot rationally choose between one unknown and another unknown Pivotal decisions in long term energy planning must inevitably be belief based and beliefs are subject to political manipulation and distortions by social mechanisms Understanding these peculiar but pervasive characteristics of energy business bears important lessons for today s decision making about energy technologies and the stakes if anything are even higher than before Energy policy communities historians of the Cold War American history and technology and sociologists would find this book an invaluable resource

Design for Life Stuart Walker,2017-04-21 Stuart Walker s design work has been described as life changing inspiring disturbing and ferocious Drawing on an extraordinarily diverse range of sources and informed by creative practice Design for Life penetrates to the heart of modern culture and the malaise that underlies today s moral and environmental

crises The author argues that this malaise is deep seated and fundamental to the modern outlook He shows how our preoccupation with technological progress growth and the future has produced a constricted view of life one that is both destructive and self reinforcing Based on over twenty five years of scholarship and creative practice he demonstrates the vital importance of solitude contemplation inner growth and the present moment in developing a different course one that looks squarely at our current precarious situation while offering a positive hopeful way forward a way that is compassionate context based human scale ethically motivated and critically creative *Design for Life* is an intensely original contribution that will be essential reading for design practitioners and students Written in a clear accessible style it will also appeal to a broader readership especially anyone who is concerned with contemporary society s rising inequalities and environmental failings and is looking for a more constructive balanced and thoughtful direction **Pragmatist and American**

Philosophical Perspectives on Resilience Kelly A. Parker, Heather E. Keith, 2019-12-03 The essays in *Pragmatist and American Philosophical Perspectives on Resilience* offer a survey of the ways that resilience is becoming a key concept for understanding our world as well as providing deeper insight about its specific actual and proposed applications As a concept with multiple theoretical and practical meanings resilience promises considerable explanatory power At the same time current uses of the concept can be diverse and at times inconsistent The American philosophical tradition provides tools uniquely suited for clarifying extending and applying emerging concepts in more effective and suggestive ways This collection explores the usefulness of theoretical work in American philosophy and pragmatism to practices in ecology community rurality and psychology **The Politics of Education and Technology** N. Selwyn, K. Facer, 2013-09-04 This book examines the struggles over technology s use in education digging into what the purpose of education is how we should achieve it who the stakeholders are and whose voices win out Drawing on theoretical and empirical work it lays bare the messy realities of technology use in education and their implications for contemporary society *The Engineering Project*

Gene Moriarty, 2010-11 We all live our daily lives surrounded by the products of technology that make what we do simpler faster and more efficient These are benefits we often just take for granted But at the same time as these products disburden us of unwanted tasks that consumed much time and effort in earlier eras many of them also leave us more disengaged from our natural and even human surroundings It is the task of what Gene Moriarty calls focal engineering to create products that will achieve a balance between disburdenment and engagement How much disburdenment will be appropriate while still permitting an engagement that enriches one s life elevates the spirit and calls forth a good life in a convivial society One of his examples of a focally engineered structure is the Golden Gate Bridge which draws people to it enlivens and elevates the human spirit and resonates with the world of its congenial setting Humans bridge and world are in tune These values of engagement enlivenment and resonance are key to the normative approach Moriarty brings to the profession of engineering which traditionally has focused mainly on technical measures of evaluation such as efficiency productivity objectivity and

precision These measures while important look at the engineered product in a local and limited sense But from a broader perspective what is locally benign may present serious moral problems undermining social justice environmental sustainability and health and safety of affected parties It is this broader perspective that is championed by focal engineering the subject of Part III of the book which Moriarty contrasts with modern engineering in Part I and pre modern engineering in Part II

International Law and Indigenous Peoples Joshua Castellino, Niamh Walsh, 2005-03-01 This volume a collection of essays by a variety of scholars in the field of indigenous rights originates from the Irish Centre for Human Rights at the National University of Ireland in Galway It highlights those instances in the work of international organizations where advances have been made concerning indigenous rights It also devotes attention to the Permanent Forum on Indigenous Issues to the Committee on the Elimination of Racial Discrimination and to a number of thematic issues in the field The human rights situations facing indigenous peoples in Australia Bangladesh Canada India Kenya Mexico Nicaragua Nigeria and South Africa are dealt with in separate chapters These surveys show a range of reactions to the multiple problems of discrimination or lack of proper responses as far as domestic legislation national implementation of the laws and national compliance with the applicable international standards are concerned

Nature, Temporality and Environmental Management Lesley Head, Katarina Saltzman, Gunhild Setten, Marie Stenseke, 2016-08-05 How are different concepts of nature and time embedded into human practices of landscape and environmental management And how can temporalities that entwine past present and future help us deal with challenges on the ground In a time of uncertainty and climate change how much can we hold onto ideals of nature rooted in a pristine and stable past The Scandinavian and Australian perspectives in this book throw fresh light on these questions and explore new possibilities and challenges in uncertain and changing landscapes of the future This book presents examples from farmers gardens and Indigenous communities among others and shows that many people and communities are already actively engaging with environmental change and uncertainty The book is structured around four themes environmental futures mobile natures indigenous and colonial legacies heritage and management Part I includes important contributions towards contemporary environmental management debates yet the chapters in this section also show how the legacy of older landscapes forms part of the active production of future ones Part II examines the challenges of living with mobile natures as it is acknowledged that environments natures and people do not stand still An important dimension of the heritage and contemporary politics of Australia Sweden and Norway is the presence of indigenous peoples As is clear in part III the legacies of the colonial past both haunt and energise contemporary land management decisions Finally part IV demonstrates how the history and heritage of landscapes including human activities in those landscapes are entwined with contemporary environmental management The rich empirical content of the chapters exposes the diversity of meanings practices and ways of being in nature that can be derived from cultural environmental research in different disciplines The everyday engagements between

people nature and temporalities provide important creative resources with which to meet future challenges **The Best of the Independent Rhetoric and Composition Journals 2010** Steve Parks,Linda Adler-Kassner,2011-03-26 THE BEST OF THE INDEPENDENT RHETORIC AND COMPOSITION JOURNALS 2010 represents the result of a nationwide conversation beginning with journal editors but expanding to teachers scholars and workers across the discipline of Rhetoric and Composition to select essays that showcase the innovative and transformative work now being published in the field s independent journals Representing both print and digital journals in the field the essays featured here explore issues ranging from classroom practice to writing in global and digital contexts from writing workshops to community activism Together the essays provide readers with a rich understanding of the present and future direction of the field **Technonatures** Damian F. White,Chris Wilbert,2010-04-05 Environmentalism and social sciences appear to be in a period of disorientation and perhaps transition In this innovative collection leading international thinkers explore the notion that one explanation for the current malaise of the politics of ecology is that we increasingly find ourselves negotiating technonatural space times International contributors map the political ecologies of our technonatural present and indicate possible paths for technonatural futures The term technonatures is in debt to a long line of environmental cultural theory from Raymond Williams onwards problematizing the idea that a politics of the environment can be usefully grounded in terms of the rhetoric of defending the pure the authentic or an idealized past solely in terms of the ecological or the natural In using the term technonatures as an organizing myth and metaphor for thinking about the politics of nature in contemporary times this collection seeks to explore one increasingly pronounced dimension of the social natures discussion Technonatures highlights a growing range of voices considering the claim that we are not only inhabiting diverse social natures but that within such natures our knowledge of our worlds is ever more technologically mediated produced enacted and contested **Agency** Florian Kossak,Doina Petrescu,Tatjana Schneider,Renata Tyszczyk,Stephen Walker,2009-12-04 While the potential of agency is most frequently taken to be the power and freedom to act for oneself for the architectural community this also involves the power and responsibility to act as intermediaries on behalf of others Presenting current thinking from practitioners and scholars from around the world this book asks for a more active relationship between the humanities the architectural profession and society Considering issues of architectural research as an agency of transformation this book explores how humanities research can better contribute towards understanding current architectural needs **Understanding Sustainable Development** John Blewitt,2017-12-22 A truly comprehensive introduction to the topic Understanding Sustainable Development is designed to give students on a wide range of courses an appreciation of the key concepts and theories of sustainable development Fully updated the third edition includes detailed coverage of the Sustainable Development Goals and their impact on global development Major challenges and topics are explored through a range of international case studies and media examples which maintain the global to local structure of the previous edition With an

extensive website and pedagogy Understanding Sustainable Development is the most complete guide to the subject for course leaders undergraduates and postgraduates **Smart Energy Technologies in Everyday Life Y.**

Strengers,2013-09-25 This book interrogates the global utopian vision for smart energy technologies and the new energy consumer intended to realise it It enriches and extends the possibilities of four residential smart strategies energy feedback dynamic pricing home automation and micro generation focusing on how they are being integrated into everyday practice

Agriculture's Ethical Horizon Robert L Zimdahl,2012-01-30 The second edition of Agriculture s Ethical Horizon is a carefully considered application of philosophical concepts such as utilitarianism and positivism to the practice of agricultural science Author Robert Zimdahl argues for an approach to agriculture guided by foundational values and addresses the questions What are the goals of agricultural and weed science What should their goals be How do and how should the practitioners of agriculture address complex ethical questions This book engages students researchers and professionals across disciplines including horticulture soil and plant science entomology and more all without requiring a background in philosophy It examines topics such as scientific truth and myth moral confidence in agriculture the relevance of ethics to sustainability and biotechnology New to this edition is a chapter examining the raising housing and slaughter of animals for human food and a chapter on alternative and organic agricultural systems Easily understood by non philosophers Chapter sidebars highlight important concepts and can be used to engage students in further discussion Companion website includes further teaching aids and a discussion board **New Waves in Philosophy of Technology** Jan Kyrre Berg

Olsen,2008-11-28 The volume advances research in the philosophy of technology by introducing contributors who have an acute sense of how to get beyond or reframe the epistemic ontological and normative limitations that currently limit the fields of philosophy of technology and science and technology studies *The Sustainable City VI* C. A. Brebbia,S.

Hernandez,E. Tiezzi,2010 Addresses the multi disciplinary aspects of urban planning a result of the increasing size of cities the amount of resources and services required and the complexity of modern society Innovative tools are required for identifying the high complexity of contemporary cities It is necessary to provide a more scientific approach to urban studies inspired by Prigogine s theories of dissipative structures and to highlight relations between different systems and between systems and the environment The challenge of placing sustainable contemporary cities lies in considering the dynamics of urban systems exchange of energy and matter and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems The task of researchers aware of the complexity of the contemporary city is to increase the capacity to manage human activities pursuing welfare and prosperity in sustainable cities Housing and

Home Unbound Nicole Cook,Aidan Davison,Louise Crabtree,2016-05-05 Housing and Home Unbound pioneers understandings of housing and home as a meeting ground in which intensive practices materials and meanings tangle with extensive economic environmental and political worlds Cutting across disciplines the book opens up the conceptual and

empirical study of housing and home by exploring the coproduction of the concrete and the abstract the intimate and the institutional the experiential and the collective Exploring diverse examples in Australia and New Zealand contributors address the interleaving of money and materials in the digital commodity of real estate the neoliberal invention of housing as a liquid asset and source of welfare provision and the bundling of car and home in housing markets The more than human relations of housing and home are articulated through the role of suburban nature in the making of Australian modernity the marketing of nature in waterfront urban renewal the role of domestic territory in subversive social movements such as Seasteading and Tiny Houses and the search for home comfort through low cost energy efficiency practices The transformative politics of housing and home are explored through the decolonizing of housing tenure the shaping of housing policy by urban social movements the lived importance of marginal spaces in Indigenous and other housing and the affective lessons of the ruin Beginning with the diverse elements gathered together in housing and home the text opens up the complex realities and possibilities of human dwelling
