**AEC Research and Development Report** Atomic Energy Commission,1971      *National Goals Symposium* United States. Congress. Senate. Committee on Interior and Insular Affairs,1972      *National Goals Symposium* United States. Congress. Senate. Interior and Insular Affairs,1972      **SCARY ROBOTS** Lawrence J. Terlizzese,2020-09-20 Technophobia causes us to reflect to stop and ask what for Why are we doing this and could there be negative consequences to our actions Technophobia is not anti technology if we are honest no one is really anti technology that would be a rejection of life itself But neither does technophobia give the green light to all things technical An altogether too common position these days is to accept technology as manna from heaven as if just the very use of it will inherently lead us in the right direction All use is good use Technophobia does not allow us such an easy conscience      Environment Kenneth E. Hornback,W. Keith Warner,1972      *Energy, Economic Growth, and the Environment* Sam H. Schurr,2013-10-18 Authors with widely different perspectives consider two important social objectives assuring future energy supplies and protecting the natural environment Contributors include Kenneth Boulding Glenn Seaborg and Barry Commoner Particularly useful to students and interested non specialists Originally published in 1972      Knowledge Economy, Information Technologies and Growth Luigi Paganetto,2017-11-30 This volume focuses on the Information and Communication ICT revolution and its impact on economic growth Even though the emergence of the knowledge economy is at the center of attention by media and is often a subject of economic policy debate economic research on the issue is still relatively underdeveloped and many aspects of it are still awaiting proper theoretical and empirical scrutiny One important question is whether as many economists and opinion leaders maintain the knowledge economy and the new information technologies have fostered the birth of a new economy which by inducing a strong productivity growth in most sectors is behind the impressive growth of GDP experienced by the US economy Empirical research has in fact been unable to provide a conclusive answer to this question This book debates this issue and provides the opportunity to discuss the economic and social effects of the ICT revolution It also focuses on the functioning and the micro economic structure of the ICT sector as well as on its impact on various industries on the financial system and on the labor market It analyses the role of the ICT revolution on regional development and it addresses important policy issues such as its consequences for antitrust legislation and government regulation      **Hearings** United States. designed to foster economic growth Two key questions are posed Do state governments have policy instruments that are sufficiently powerful to affect the levels and growth rates of their regional economies and Are national and global economic forces so powerful that they render state action ineffective Several subsidiary themes are discussed in this context namely the most commonly used policy instruments the impacts on federalism and on governance and how well the universities and other educational institutions serve the economic activities imposed on them

**Program Aid** , 1978 **Philippine Development** , 1983 Policies for Industrial Growth in a Competitive World , 1984 **Nuclear Energy** Karl O. Ott, 2012-12-06 E L Zebroski During the 1970s there was rapid growth of a philosophy that assumes that deindustrialization will result in an Elysian postindustrial society This view is generally antitechnology commonly in opposition to large scale energy sources and often supportive of high cost speculative or at most small scale energy sources The social and economic costs of policies which would lead to deindustrialization are ignored or considered to be irrelevant The development of civilian nuclear energy as a by product of wartime developments also brings with it an association with the fear of nuclear weapons and with the repugnance for war in general Many of these views and associations mingle to provide significant political constituencies These have had considerable impact on party platforms and elections Also another important aspect is the conservation viewpoint This view correctly concerns the fact that in definite increase in per capita energy consumption coupled with increasing U S and world populations must at some point be restrained by limits on resources as well as by limits arising from environmental effects All of these concerns have been subject to voluminous analysis publications and public discussion They underlie one of the dominant social movements of the 1970s and 1980s Indefinite exponential growth of energy production is neither possible nor desirable
