Technology, Legal Education and Legal Profession in China and Australia Shu Zhang, Jie Luo, Peng Guo, 2025-02-04 This book adopts a comparative and empirical approach to the discussion relating to the subject matter. The book compares various selected topics in both China and Australia, drawing attention to historical, contemporary, and international characteristics. Also in discussing the topics, the authors will conduct surveys and interviews to get first-hand materials and describe the real situations in both countries. To the best knowledge of the authors, this is the first time that this approach has been adopted to compare legal education and the legal profession focusing on China and Australia. This book introduces legal education and the legal profession in China and Australia to lay a foundation based on which it further compares them. More importantly, this book discusses some selected topics relating to legal education and the legal profession in the context of globalization, the digital age, and COVID-19. The intended readership is an international audience including students at both undergraduate and graduate levels, legal scholars, and legal practitioners in general and those in China and Australia in particular. This book intends to analyse the discourse of legal education and identify and create innovative ways of teaching and learning the law in China and Australia. It focuses on research theory and practice within legal education and the legal profession based on imaginative and sophisticated educational thinking from an empirical and comparative perspective. It also takes a broad view of theory and practice relating to legal education and the legal profession. It is sensitive to the diversity of contexts in which law is taught, learned, and practised.

Toxic Exposures Phil Brown, 2007-06-29 The increase in environmentally induced diseases and the loosening of regulation and safety measures have inspired a massive challenge to established ways of looking at health and the environment Communities with disease clusters women facing a growing breast cancer incidence rate and people of color concerned about the asthma epidemic have become critical of biomedical models that emphasize the role of genetic makeup and individual lifestyle practices Likewise scientists have lost patience with their colleagues and government's failure to adequately address environmental health issues and to safeguard research from corporate manipulation Focusing specifically on breast cancer asthma and Gulf War related health conditions contested illnesses that have generated intense debate in the medical and political communities Phil Brown shows how these concerns have launched an environmental health movement that has revolutionized scientific thinking and policy Before the last three decades of widespread activism regarding toxic exposures people had little opportunity to get information Few sympathetic professionals were available the

scientific knowledge base was weak government agencies were largely unprepared laypeople were not considered bearers of useful knowledge and ordinary people lacked their own resources for discovery and action Brown argues that organized social movements are crucial in recognizing and acting to combat environmental diseases His book draws on environmental and medical sociology environmental justice environmental health science and social movement studies to show how citizen science alliances have fought to overturn dominant epidemiological paradigms His probing look at the ways scientific findings are made available to the public and the changing nature of policy offers a new perspective on health and the environment and the relationship among people knowledge power and authority *The Liability Maze* Peter W. Huber, Robert E. Litan, 2010-12-01
