Robinson,2012-12-06 As with the products and processes described in Volume I of this book many of the technical changes associated with for example the manufacture of cheeses or fermented milks have been subtle rather than dramatic Nonetheless the importance for the dairy industry has often been profound The market demand for dairy products containing health promoting cultures is a development that was barely discernible 10 years ago and yet many manufacturers are now generating a whole range of bio yoghurts and similar retail items Similarly the legislation covering food hygiene has been modified to place additional demands upon manufacturers a move that has in turn encouraged the further development of

analytical methods for quality control. These modifications to manufacturing practices are along with many others reflected in this second edition and I acknowledge with gratitude the enthusiastic co operation of all the authors associated with this project in bringing their disparate contributions up to date.

R K ROBINSON v Preface to the First Edition

Retail sales of most dairy products are still on the increase world wide and this expansion is at least in part a reflection of the fact that prices have tended to remain at a competitive level.

Modern Technology Of Milk Processing & Dairy Products (3Rd Edition) Niir Board, 2010-10

The dairy industry plays an important roll in our daily life. It is difficult to realize how fast changes are taking place in the dairy industry. One of the important factors affecting the total amount of milk produced and the way in which this milk is utilized is the demand for the various products. In order to prepare such a diversity of products many different processes have been developed by the industry. Each of these has been designed to take advantage of some particular property of milk. Developments in the dairy industry are enough to justify a revision of a considerable amount of material in this book. This book deals with processes, formulae, project profiles, details of plant machinery, raw materials with their resources etc of various dairy products. This book will help all its readers from entrepreneurs to food industries, technocrats and scientists.
