Law and renewable energy Fernando Joaquim Ferreira Maia, 海彦 (Hai Yan), 海彦 (Haitian Ma), Ana Paula Basso, 2023-08-01 Discussing the right of Renewable Energies is to ensure the possibility of sustainable development by a path different from that taken by the great central nations Academics from China and Brazil lend themselves through this cooperation to the production of knowledge that serves as a basis for an adequate regulation of the matter taking into account the international law for people's development and the common principles of environmental protection added to the social protection and improvement of institutions plus the control of planned actions regarding the execution and implementation of this new energy matrix Law is a language that makes it possible in addition to resolving possible conflicts to guide and put into practice concrete actions in the sense of expanding possibilities for the good

use of renewable energies *Sharing RF Spectrum with Commodity Wireless Technologies* Jan Kruys, Luke Qian, 2011-08-09
Much energy has been spent on the subject of spectrum scarcity that would threaten to stunt the growth of wireless technologies and services This concern comes on the heels of the great successes of both cellular communications and consumer oriented communications like Wi Fi and Bluetooth that have changed the way people use computers and communications and that have led to the creation of large new markets for products and services The response of many spectrum regulators throughout the world in addressing these concerns has been to consider releasing more spectrum for unlicensed or for shared use An example is the spectrum that is released by the transition to digital TV the frequencies freed up are destined in part to new applications that would be license exempt A possible beneficiary of new spectrum releases would be the smart grid a networked application of digital sensor and control technology to the energy delivery segment of the energy utility industry This policy has heightened the interests of all involved in spectrum sharing and many proposals are being considered or brought forward However theory in this area is scarce and practice proves resistive of quick solutions A case in point is RLAN radar spectrum sharing in the 5GHz range six years after the ITU R allocated this shared spectrum the rules for sharing as well as the means to verify compliance with these rules are not fully mature Another recent development is the interest in spectrum pricing and trading which tend to focus on the economic aspects of spectrum sharing at the expense understanding of the limitations as well as the technical possibilities of spectrum sharing **Use of**
