DeGregori, 2012-12-06 **Air University Abstracts of Research Reports**, 1986 World Military Expenditures and Arms Transfers, 1987 World Military Expenditures and Arms Transfers, 1986 United States. Arms Control and Disarmament Agency, 1987 **Troubled Partnership** Mark A. Lorell, 1996-01-01 During World

War II Japanese fighters such as the famed Zero were among the most respected and feared combat aircraft in the world. But for decades following the defeat of Japan in 1945, a variety of political and economic factors prevented Japan from developing its own modern national fighter. This changed in the 1980s when Japan began independently developing its first world class fighter since World War II. After several years of contentious negotiations, the Japanese agreed to work with the United States to cooperatively develop a minimally modified F-16. The FS-X. The new fighter, however, has evolved into a world class aircraft developed largely by Japanese industry, primarily due to errors committed by the U.S. side. By the fall of 1995, fifty years after the end of World War II, the Zero for the 1990s will have made its first flight, catapulting Japan into the elite ranks of nations capable of developing the most advanced weapon systems. In *Troubled Partnership*, Mark Lorell traces the evolution of the FS-X, disclosing the conflicting economic and security objectives advanced by U.S. officials, the flawed U.S. policy of technology reciprocity, and the challenges of international collaboration. Its deep intimacy with the interplay of policy and economy will make this volume of intense interest to political scientists, military studies specialists, historians, and government officials.

Hierarchical Decision Modeling Tugrul U. Daim, 2015-07-25. This volume, developed in honor of Dr. Dundar F. Kocaoglu, aims to demonstrate the applications of the Hierarchical Decision Model (HDM) in different sectors and its capacity in decision analysis. It is comprised of essays from noted scholars, academics, and researchers of engineering and technology management around the world. This book is organized into five parts: Technology Policy Planning, Strategic Technology Planning, Technology Assessment, Application Extensions, and Methodology Extensions. Dr. Dundar F. Kocaoglu is one of the pioneers of multiple decision models using hierarchies and the creator of the HDM in decision analysis. HDM is a mission-oriented method for evaluation and/or selection among alternatives. A wide range of alternatives can be considered, including but not limited to different technologies, projects, markets, jobs, products, cities to live in, houses to buy, apartments to rent, and schools to attend. Dr. Kocaoglu's approach has been adopted for decision problems in many industrial sectors, including electronics, research and development, education, government planning, agriculture, energy, technology transfer, semiconductor manufacturing, and has influenced policy locally, nationally, and internationally. Moreover, his students developed advanced tools and software applications to further improve and enhance the robustness of the HDM approach. Dr. Kocaoglu has made many contributions to the field of Engineering and Technology Management. During his tenure at Portland State University, he founded the Engineering and Technology Management program, where he served as Program Director and later Department Chair. He also started the Portland International Conference on Management of Engineering and Technology (PICMET), which organizes an annual conference in international locations such as Korea, Turkey, South Africa, Thailand, and Japan. His teaching has won awards and resulted in a strong sense of student loyalty among his students, even decades later. Through his academic work and research, Dr. Kocaoglu has strongly supported researchers of engineering management and has provided tremendous service to the field. This volume recognizes and celebrates Dr. Kocaoglu's profound contributions to

the field and will serve as a resource for generations of researchers practitioners and students Strategic Review ,1987 dedicated to the advancement and understanding of those principles and practices military and political which serve the vital security interests of the United States **Measuring Globalisation: OECD Economic Globalisation Indicators 2010** OECD,2010-08-25 This second edition of the OECD Economic Globalisation Indicators presents a broad range of indicators on trade foreign direct investment the economic activity of multinational firms and the internationalisation of technology NBS Special Publication ,1968 **Hydraulic Research in the United States and Canada, 1978** Pauline H. National Bureau of Standards,1978 Routledge Handbook of the Economics of Knowledge Cristiano Antonelli,Albert Link,2014-12-05 The Routledge Handbook of the Economics of Knowledge provides a comprehensive framework to integrate the advancements over the last 20 years in the analysis of technological knowledge as an economic good and in the static and dynamic characteristics of its generation process There is a growing consensus in the field of economics that knowledge technological knowledge in particular is one of the most relevant resources of wealth yet it is one of the most difficult and complex activities to understand or even to conceptualize The economics of knowledge is an emerging field that explores the generation exploitation and dissemination of technological knowledge Technological knowledge cannot any longer be regarded as a homogenous good that stems from standardized generation processes Quite the opposite technological knowledge appears more and more to be a basket of heterogeneous items resources and even experiences All of these sources which are both internal and external to the firm are complementary as is the interplay between a bottom up and top down generation processes In this context the interactions between the public research system private research laboratories and various networks of learning processes within and among firms play a major role in the creation of technological knowledge In this Handbook special attention is given to the relationship among technological knowledge and both upstream scientific knowledge and related downstream resources By addressing the antecedents and consequences of technological knowledge from both an upstream and downstream perspective this Handbook will become an indispensable tool for scholars and practitioners aiming to master the generation and the use of technological knowledge Spinoff ,1979 **Parallel Trade in Europe** Christopher Stothers,2007-04-02 Shortlisted for the 2008 Young Authors Inner Temple Book Prize Are parallel importers the key to free trade breaking down long established national barriers for the benefit of all Or do they instead just operate in a dubious grey market for their own profit free loading on the investment of innovators and brand owners to the ultimate detriment of everyone Parallel trade is in turn lionised and demonised both in legal commentary and in the mainstream press As one might expect the truth lies somewhere between these extremes Once goods have been manufactured they are put onto the market in one country by the manufacturer Parallel trade occurs when the goods are subsequently transferred to a second country by another party the parallel trader who may be the end consumer The

distinguishing feature of parallel trade is that the manufacturer did not intend those particular goods to end up in the second country. The goods are normally described in that country as parallel imports or grey market goods. The latter term is generally used to suggest that the trade while not exactly black market is not entirely lawful either. Understanding how European Community law operates to permit or restrict parallel trade involves exploring a complex matrix of rules from the fields of free movement, intellectual property, competition and regulatory law, including both private and public enforcement regimes. Where goods are parallel imported from outside the Community, these rules change and new considerations come into play, such as obligations arising from the European Economic Area, the World Trade Organization and bilateral free trade agreements. The experience of Europe, which has grappled with the issues on a regional basis for more than four decades, provides a fertile source for examination of parallel trade in other jurisdictions. Christopher Stothers' comprehensive treatment successfully analyses this difficult topic, considering both Community and national decisions. **Bulletin of the Atomic Scientists**, 1994-09. **Examining the Rule of Two**.
