Techno-sexual Landscapes Ángel J. Gordo-López, Richard Cleminson, 2004 At first sight to ask how sex has been influenced by technology over time may appear to be a perplexing question There is no doubt about the current importance of the new technologies of reproduction sex change operations and the passion that electronic chat rooms incite However it might be argued that this is a recent phenomenon and the past has little to reveal about techno sexual relations This book draws on a number of examples of productive relations between technology and sexuality the technical and sexual organization of medieval monasteries the moral and erotic transgression afforded by the early wind and water mill and the romances forged in the context of the train The authors focus on three main eras the medieval period around the eleventh century with its monasteries as sites of technical innovation and heretical religious movements on the borders of Christianity early modernity from the time of the European discoveries and the creation of others including the natives of South America and the witch and the present and the technologically mediated future What might be the connection between mills navigation techniques and trains and the realm of sexuality How does the government of sexuality and socio economic relations in the sixteenth century across distances find resonance in cyberspace Once the question of technology and sexuality has been placed in a long term perspective the reader is invited to reconsider relations often brushed aside or devalued for their connection with low popular or quotidian culture practices and spaces Acknowledging the uncomfortable social fact of techno sexuality as a quotidian experience allows us to recuperate a range of often discounted or forgotten social actors movements and landscapes
