The Software Factory Challenge Herbert Weber, 1997 The Eureka Software Factory project ESF was set up by a Group of European partners in 1987 Its objective was broadly to improve the large scale software production process by introducing an industrialised approach to have The Software Factory Challenge social organisational and technical aspects The project was set up under the pan European Eureka programme and it was funded by the partners together with their national governments This book is not a history of the ESF project but rather a presentation of its main ideas and achievements and an account of how the concepts pioneered by the project have become part of a general movement in both the industrial and academic domains In this movement the facility for the production use and maintenance of large scale computer artefacts the Software Factory is treated in a wide

and organic way so as to include concepts such as business value and process improvement with the development of new technologies being driven by these new wide requirements This new approach is in contrast with a narrowly technological one in which individual tasks like programming are aided by machines but in which the production process as a whole is not supported The main body of the book is divided into four Parts Part I gives a short overview of the ESF project and its ideas and goes on to attempt to place the ESF work in the context of industry as a whole with reference to both producers and users of Information Technology systems Part II sets out to explain the technological basis of the Software Factory as seen by ESF and goes on to describe some experimental and pioneering implementations of Factory Support Environments and their constituents Part III is devoted to the most complete implementation of an ESF Factory Support Environment to date Kernel 2r This Section provides a highly detailed discussion of both design and implementation issues In Part IV addresses what deployment strategies are now available to continue the spread of these ideas in order to meet the goal of better software based systems i e systems which are safer more economical to build more easily changed and more useful than those that have been built up to now Finally a Glossary of Terms and a list of References is given Readers those who have a professional interest in Information Technology

Computer Networking and Scholarly Communication in the Twenty-First-Century University Teresa M. Harrison, Timothy Stephen, 1996-04-04 This book explores the various ways in which computer networking and more specifically the Internet is changing the practices the structure and the products of academic scholarship It considers research teaching and dissemination of knowledge across a range of disciplines in the humanities sciences and social sciences in order to identify particular uses of networking that will come to constitute the academic world of the future The contributors consider such themes as how networking and particular software environments can be used to support inquiry within research specialties and how scholars in diverse disciplines respond to the availability of new networked channels of scholarly communication In the context of education they argue that networking can reconfigure the process of learning encompassing new audiences new relationships with teachers and new learning skills adapted for the network environment The products of such new configurations are also discussed The future of electronic journal publication is considered by innovators who have designed some of the first experiments in refereed electronic journal publication Finally the new responsibilities and roles of the academic library and academic publishers in a networked environment are debated

Ethical and Social Issues in the Information

Age Joseph M. Kizza, 2007-06-02 Since the publication of the first edition in 1997 there have been tremendous changes in the fields of computer science and information sciences. During this period we have become more dependent than ever before on computer and telecommunication technology. As we both individually and as nations become more dependent on cyberspace technology, it has itself become a critical component of individual nations' security infrastructures that control power grids, gas and oil storage facilities, transportation, and all forms of national communication, including emergency services. The recent rise in cyber attacks, many of them with lightning speed affecting millions of computers worldwide and causing billions of dollars in losses both to individuals and businesses, is an indication of how unprepared we are to handle such attacks, not only today but also in the future. Such attacks are a mark of the poor state of our cyberspace security policies. The facts that there are no signs to indicate there is going to be a slowdown in such attacks and that nations are not doing anything worth calling preventive has heightened the need for an effective strategy to produce responsible professionals who can play an active role in the fight against computer and cyber attacks and vandalism.
