Managing Telecommunications Networks Lawrence Bernstein, C.M. Yuhas, 2005-11-25 It is important to understand what came before and how to meld new products with legacy systems Network managers need to understand the context and origins of the systems they are using Programmers need an understanding of the reasons behind the interfaces they must satisfy and the relationship of the software they build to the whole network And finally sales representatives need to see the context into which their products must fit

Managing Business and Service Networks Lundy Lewis, 2005-12-07 Most everything in our experience requires management in some form or other our gardens our automobiles our minds our bodies our love lives our businesses our forests our countries etc Sometimes we don't call it management per se We seldom talk about managing our minds or automobiles But if we think of management in terms of monitoring maintaining and cultivating with respect to some goal then it makes sense We certainly monitor an automobile albeit unconsciously to make sure that it doesn't exhibit signs of trouble And we certainly try to cultivate our minds This book is about managing networks That itself is not a new concept We've been managing the networks that support our telephones for about 100 years and we've been managing the networks that support our computers for about 20 years What is new and what motivated me to write this book is the following i the enormous advancements in networking technology as we transition the 20th century to the 21st century ii the increasing dependence of human activities on networking technology and iii the commercialization of services that depend on networking technology e.g. email and electronic commerce
