Educational Technology Greg Kearsley, 1994 **Telecommunications and Education** United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Communications, 1993 E-Learning, E-Education, and Online Training Giovanni Vincenti, Alberto Bucciero, Markus Helfert, Matthias Glowatz, 2016-11-12 This book constitutes the proceedings of the 3rd International Conference on E Learning E Education and Online Training eLEOT 2016 held in Dublin Ireland August 31 September 2 2016 The 25 revised full papers presented were carefully reviewed and selected from 35 submissions They focus on topics as augmented reality learning blended learning learning analytics mobile learning virtual learning environments **Homeland Security Technologies for the 21st Century** Ryan K. Baggett, Chad S. Foster, Brian K. Simpkins, 2017-04-17 A comprehensive textbook that overviews common technologies utilized within the homeland security enterprise with an emphasis on contemporary homeland security mission areas and end user applications Designed for students entering or currently working in the safety security and emergency management disciplines in the public or private sectors this textbook presents a broad array of homeland security technology types from the viewpoint of end user applications and homeland security mission areas The authors investigate various theories behind the use of technologies and assess the importance of technologies for achieving goals and objectives The content includes not only technical capabilities but also a blend of sample applications of technologies using an all hazards framework and use cases at all levels of practice including both the public and private sectors The authors provide an overview of preparedness applications preventive and protective systems and mitigation response and recovery technologies Topics such as ethical and privacy concerns associated with implementing technologies and use of the Internet and social media receive special attention In addition to readers directly involved in the security disciplines this book will be useful for students in technical fields of study such as geographic information systems GIS computer science or engineering who are seeking information on standards theories and foundations underlining homeland security technologies *Handbook of Online Learning* Kjell Erik Rudestam, Judith Schoenholtz-Read, 2002-02-19 I found the book excellent and read every one of the 450 pages Many of the chapters reflect the Fielding Institute's focus on human and organizational behaviour educational leadership and organizational management The book will be particularly appropriate for readers from a corporate training or business school background though there is much for academics and online educators at all levels and subject areas to learn from this well crafted book There are many books and articles about online learning This is one of the better ones Robin Mason Computers and Education Technology mediated instruction has taken the university and the corporate sector by storm As more instructors teach online for a dispersed learning community in both academic and business environments there's a need for resources that will help them adapt to this new teaching method Educators who come out of traditional academic institutions tend to use traditional methods when offering courses online e.g. lectures textbooks and readings examinations

rather than attend to small group processes and principles of what the editors of this volume call andragogy This Handbook goes beyond the mechanics of how to create and direct an online learning experience to consider such a new approach to pedagogy in doing so The editors primary purpose is to clarify the conceptual issues that underlie effective online teaching and to offer practical guidance to educators and corporate trainers who plan to teach in a virtual environment Their central tenet is the adoption of computer networks as the teaching vehicle of the future demands a re examination of our core beliefs about pedagogy and how students learn The transfer of a classroom curriculum into cyberspace is deceptively simple but doing so without an appreciation of the nuances and implications of learning online ignores not only the potential of this medium but the inevitable realities of entering it Rather than fear the challenges that new technology brings to systems of learning the editors hope to help instructors embrace it by re thinking how knowledge is acquired and how educational processes may be optimally designed in a new age of teaching and learning Features Benefits Part I provides an overview and includes discussion of the unique structural aspects of the electronic learning environment pedagogical issues curriculum design psychological and group dynamics and ethical issues Part II examines practical issues associated with implementing courses online both in the traditional university setting and in professional corporate training environments The book draws heavily on personal case examples many from The Fielding Graduate Institute s 26 years of teaching in nontraditional distributed learning environments
