Resources in Education , 1997 *Radio Receivers for Systems of Fixed and Mobile Communications* Vasiliy V. Logvinov, Sergey M. Smolskiy, 2022-05-13 The textbook acquaints the reader with the architecture of receivers of analog and digital radio systems helps to study the stages of designing a modern radio receiver and reveals the reasons and methods for its effective operation in networks for various purposes Particular attention is paid to the methods of generating and

processing signals in the receivers of digital systems with multiple access which make it possible to provide data transfer rates close to the maximum possible according to Shannon As a textbook for students studying methods of optimal signal reception the book will also be useful to specialists in the field of telecommunications involved in the development of radio receivers The book shows how the development of theoretical circuitry and integrated technologies led to the active introduction of algorithmic methods for signal processing changed both the design of receivers and the methods of forming the information flow in free space MIMO beamforming The creation of a global 5G network based on heterogeneous networks puts forward new requirements for the architecture of receivers which are determined by the requirements to achieve high data rates low time delays or use in networks with coordinated multipoint transmission and reception CoMP To consolidate the knowledge gained the book includes a complete set of materials for online classes including questions and answers a guide to solving problems for each chapter and computer modeling units of receivers in the MicroCAP environment based on preliminary calculations

Mismanaged Trade? Kenneth Flamm, 2010-12-01 The semiconductor industry is at the forefront of current tensions over international trade and investment in high technology industries This book traces the struggle between U S and Japanese semiconductor producers from its origins in the 1950s to the novel experiment with managed trade embodied in the U S Japan Semiconductor Trade Arrangements of 1986 and the current debate over continuation of elements of that agreement Flamm provides a thorough analysis of this experiment and its consequences for U S semiconductor producers and users and presents extensive discussion of patterns of competition within the semiconductor industry Using a wealth of new data he argues that a fundamentally new trade regime for high technology industries is needed to escape from the present impasse He lays out the alternatives from laissez faire to managed trade and argues strongly for a new set of international ground rules to regulate acceptable behavior by government and firms in high tech industries Flamm s detailed analysis of competition within the semiconductor industry will be of great value to those interested in the industrial organization of high technology industries as well as those concerned with trade and technology policy international competition and Japanese industrial policies
