General Theory of Light Propagation and

Imaging Through the Atmosphere T. Stewart McKechnie,2015-08-05 This book lays out a new general theory of light propagation and imaging through Earth's turbulent atmosphere Current theory is based on the now widely doubted assumption of Kolmogorov turbulence The new theory is based on a generalized atmosphere the turbulence characteristics of which can be established as needed from readily measurable properties of point object or star images The pessimistic resolution predictions of Kolmogorov theory led to lax optical tolerance prescriptions for large ground based astronomical telescopes which were widely adhered to in the 1970s and 1980s Around 1990 however it became clear that much better resolution was actually possible and Kolmogorov tolerance prescriptions were promptly abandoned Most large telescopes built before 1990 have had their optics upgraded e.g the UKIRT instrument and now achieve without adaptive optics AO almost an order of magnitude better resolution than before As well as providing a more comprehensive and precise understanding of imaging through the atmosphere with large telescopes both with and without AO the new general theory also finds applications in the areas of laser communications and high energy laser beam propagation

The Emergence of

Astrophysics in Asia Tsuko Nakamura,Wayne Orchiston,2017-11-03 This book examines the ways in which attitudes toward astronomy in Australia China India Indonesia Japan South Korea New Zealand Taiwan Thailand and Uzbekistan have changed with the times The emergence of astrophysics was a worldwide phenomenon during the late nineteenth and early twentieth centuries and it gradually replaced the older style positional astronomy which focused on locating and measuring the movements of the planets stars etc Here you will find national overviews that are at times followed by case studies of individual notable achievements Although the emphasis is on the developments that occurred around 1900 later pioneering efforts in Australian Chinese Indian and Japanese radio astronomy are also included As the first book ever published on the early development of astrophysics in Asia the authors fill a chronological and technological void Though others have already written about earlier astronomical developments in Asia and about the recent history of astronomy in various Asian nations no one has examined the emergence of astrophysics the so called new astronomy in Asia during the late nineteenth and early twentieth centuries

Building and Using Binoscopes

Norman Butler,2017-10-03 Covering both homemade and commercial products this book provides the reader with simple and straightforward information about the modeling building and use of binoscopes Binoscopes can be thought of as binoculars enlarged to the size of telescopes essentially a combination of the two Constructing a binoscope is easier than most people think but it still demands attention to detail and proper background knowledge The author goes on to provide additional information about the products currently on the market should the reader choose to purchase one instead of building it Lastly the book also compares binoscopes with telescopes in great detail outlining the differences the reader can expect to

see in the night sky from using both The celestial views obtained with a binoscope compared to a single telescope of the same aperture are a very different experience The new edition emphasizes the obvious advantages of viewing celestial objects through a binoscope There are also many new photos and additional information on the latest equipment and some very special and rare equipment a collector might be interested in Newly added cartoons and additional images of beautiful deep sky objects in each of the chapters makes reading the book a more enjoyable experience Finally there is a new comet discovery form and guide to follow for such discoveries and a complete list of Messier objects for those interested in searching for these
