this reason unusually for vernacular architecture the buildings of the region were subject to a wide range of influences This book the fruit of twenty years research provides an account of vernacular architecture in the Oxford region from Anglo Saxon times to the 19th century It begins with a discussion of methods and procedures followed by a description of building materials stone brick slate and thatch This serves as an introduction to the heart of the book eleven chapters dealing with surveys of cruck buildings manorial and moated sites town houses with particular emphasis on Abingdon and houses in the countryside from farmhouses to cottages There are then chapters on fire hazards public houses and public buildings Several appendices are devoted to wall paintings ferramenta apotropaic marks carpentry details secrets under the floorboards fireplaces staircases and windows The book is richly and profusely illustrated with over 500 illustrations photographs maps and a particular strength a large number of drawings of architectural details and sketch perspectives

**The Buildings of the Malting Industry** Amber Patrick, 2023-11-15 Winner of the Association for Industrial Archaeology's Peter Neave Award for Outstanding Scholarship 2025 The Buildings of the Malting Industry is a fascinating book on the buildings that have helped make our much loved beer over the centuries Malt is one of the main ingredients of beer yet the buildings in which it was and is now produced have received very little attention although most towns and many villages had their own malthouse and kiln This is the first book to address the paucity of detail on maltings which historically were to be found in all English counties Today evidence for a malthouse may just be a name on a building or street However where they survive the pyramidal roofs clearly demonstrate the presence of a malthouse as do other less recognisable features This book gives details of early malt kilns and shows how they changed over the centuries Early buildings were essentially vernacular ones but by the mid 19th century some firms were using specialist architects Then in the 20th century there was more engineering input to new maltings in particular with the development of the pneumatic process This once widespread industry is now mainly confined to the eastern side of the country Elsewhere surviving maltings have been converted to other uses and examples of these are given There are illustrations of the exteriors and interiors of malthouses and kilns which show some of the developments and how some buildings have been reused

*Building Chester* Phillip Jones, 2009-12-05 For a stranger to Chester the opportunity to explore the streets and buildings of a 2000 year old city must promise much to the first time visitor The presence of its almost intact circuit of medieval defensive walls its many early churches world famous shopping rows and its overtly historic character all suggest a place that has its foundations in much more ancient times However the architecture of modern day Chester can be deceptive with many buildings appearing to much older than they actually are being designed by a small group of leading regional architects who combined to create what is commonly referred to as the Chester Look a mixture of half timbered vernacular buildings and classically inspired

facades both of which hark back to more ancient days This book attempts to identify and explain the various histories of many of Chester's landmark sites and buildings who built them owned them and what purpose did they serve within its 224 pages *Proceedings, American Philosophical Society (vol. 80, 1939)* , **The Rise of the Castle** M.
