Kouvatsos, 2006-04-18 Information Highways are widely considered as the next generation of high speed communication systems These highways will be based on emerging Broadband Integrated Services Digital Networks B ISDN which at least in principle are envisioned to support not only all the kinds of networking applications known today but also future applications which are not as yet understood fully or even anticipated Thus B ISDNs release

networking processes from the limitations which the communications medium has imposed historically The operational generality stems from the versatility of Asynchronous Transfer Mode ATM which is the transfer mode adopted by ITU T for broadband public ISDN as well as wide area private ISDN A transfer mode which provides the transmission multiplexing and switching core that lies at the foundations of a communication network ATM is designed to integrate existing and future voice audio image and data services Moreover ATM aims to minimise the complexity of switching and buffer management to optimise intermediate node processing and buffering and to bound transmission delays These design objectives are met at high transmission speeds by keeping the basic unit of ATM transmission the ATM cell short and of fixed length
