

Ecosystem-based Adaptation in Mountain Ecosystems Programme

- Strengthening of local organizations and management of communal lands.
- Capacity building and technical assistance in livestock and rangeland management, including animal husbandry of rangeland population.
- Implementation of equipment for livestock and rangeland management (fences, seeds, organic fertilizers, fencing and posts, etc)
- Installation of fences in 4,500 hectares of communal land for livestock and conservation of 800 hectares of rangeland habitat.
- Value chain development for rangeland with enhanced connections to markets.
- In Cusco, as regards measures: restoration of ancient hydrological infrastructure and community-based natural pasture management are being implemented.

The measures that are starting to be implemented with project support respond directly both to local drivers of degradation (overgrazing and customary norms) and to climate induced impacts on the main local economy which is dependent on rangelands.

Indicators for development of ecosystem-based and adaptive capacity indicators were designed and used to develop comprehensive WRI systems for each pilot country to track, monitor and evaluate impact of their new plan.

Vulnerability & Impact Assessment (VIA) approaches that integrate ecosystem resilience were developed.
