

How To Write A Product Specification Sheet

A product spec serves as a guide for the product team, detailing what's needed to build the product. Typically crafted by the product manager, it includes features, technical descriptions, performance specs, and standards. Follow these steps to write your product specification sheet.

1.

Define the problem

This product aims to solve specific business or consumer needs. It's important to highlight in the product summary the problems and needs the product addresses.

2.

Understand customer input

Customers look for products that fulfill their needs and objectives, as outlined by user stories. Use feedback from existing or related products to learn how your new product can help your target customers.

3.

Include stakeholders

Getting stakeholders involved in development helps collect important feedback and boosts project support. It also makes employees feel appreciated and more eager to work together with the team.

4.

Choose specifications

Important product details, such as size, safety rules, expiration information, and design, are crucial for developers to make sure the product is safe and works well. These specifics make beginning the product creation process easier.

5.

Perform user testing

Once you've planned the design and development, make a prototype. Have customers test it to make sure it meets their needs. Listen to their feedback on usability and check that everything functions as it should.

6.

Revise based on user feedback

After testing with users, find out what they like, don't like, find hard, or don't need. Then, fix any problems and update the specs accordingly. Pay special attention to parts where users struggle and think about how to make them better or if you should remove those parts entirely.
