Spectral Decompositions on Banach Spaces I. Erdelyi, R. Lange, 2006-11-15      **Spectral Decompositions on Banach Spaces** I. Erdelyi, R. Lange, 2014-01-15      **Spectral Decompositions on Banach Spaces** Ivan Erdelyi, Ridgley Lange, 1977-01-01      *Analytic Functional Calculus and Spectral Decompositions* Florian-Horia Vasilescu, 1983-01-31  
Spectral Decomposition on Banach Spaces, 1977      Spectral Decomposition of Operators on Banach Spaces Ali Akbar Jafarian, 1973      **Operators in Banach Space which Admit a Generalized Spectral Decomposition** František Wolf, 1956      *Operators in Banach Space Which Admit a Generalized Spectral Decomposition* Frantisek Wolf, 2013-03  
*Spectral Decompositions and Analytic Sheaves* Jörg Eschmeier, Mihai Putinar, 1996 Rapid developments in multivariable spectral theory have led to important and fascinating results which also have applications in other mathematical disciplines In this book classical results from the cohomology theory of Banach algebras multidimensional spectral theory and complex analytic geometry have been freshly interpreted using the language of homological algebra It has also been used to give insights into new developments in the spectral theory of linear operators Various concepts from function theory and complex analytic geometry are drawn together and used to give a new approach to concrete spectral computations The advantages of this approach are illustrated by a variety of examples unexpected applications and conceptually new ideas which should stimulate further research      **Analysis and Geometry of Markov Diffusion Operators** Dominique Bakry, Ivan Gentil, Michel Ledoux, 2013-11-18 The present volume is an extensive monograph on the analytic and geometric aspects of Markov diffusion operators It focuses on the geometric curvature properties of the underlying structure in order to study convergence to equilibrium spectral bounds functional inequalities such as Poincaré Sobolev or logarithmic Sobolev inequalities and various bounds on solutions of evolution equations At the same time it covers a large class of evolution and partial differential equations The book is intended to serve as an introduction to the subject and to be accessible for beginning and advanced scientists and non specialists Simultaneously it covers a wide range of results and techniques from the early developments in the mid eighties to the latest achievements As such students and researchers interested in the modern aspects of Markov diffusion operators and semigroups and their connections to analytic functional inequalities probabilistic convergence to equilibrium and geometric curvature will find it especially useful Selected chapters can also be used for advanced courses on the topic      **Analysis at Urbana: Volume 2, Analysis in Abstract Spaces** Earl R. Berkson, N. Tenney Peck, J. Jerry Uhl, 1989-03-30 Throughout the academic year 1986-7 the University of Illinois hosted a symposium on mathematical analysis attended by some of the leading figures in the field This resulting book lays emphasis on the synthesis of modern and classical analysis The contributed articles cover the mainstream topics and will be essential to researchers in mathematical analysis      **Analytically Invariant Spaces in Spectral Decompositions of Linear Operators in Banach Spaces** Ridgley E. Lange, 1974      A Spectral Decomposition for Certain Operators in a Banach Space

William Parzynski, 1968      **Canadian Journal of Mathematics** , 1974-12      Classes of Linear Operators Vol. I Israel Gohberg, Seymour Goldberg, Marinus Kaashoek, 2013-03-09 After the book Basic Operator Theory by Gohberg Goldberg was published we that is the present authors intended to continue with another book which would show the readers the large variety of classes of operators and the important role they play in applications The book was planned to be of modest size but due to the profusion of results in this area of analysis the number of topics grew larger than expected Consequently we decided to divide the material into two volumes the first volume being presented now During the past years courses and seminars were given at our respective institutions based on parts of the texts These were well received by the audience and enabled us to make appropriate choices for the topics and presentation for the two volumes We would like to thank G J Groenewald A B Kuijper and A C M Ran of the Vrije Universiteit at Amsterdam who provided us with lists of remarks and corrections We are now aware that the Basic Operator Theory book should be revised so that it may suitably fit in with our present volumes This revision is planned to be the last step of an induction and not the first      Recent Advances in Operator Theory, Operator Algebras, and their Applications Dumitru Gaspar, Israel Gohberg, Dan Timotin, Florian H. Vasilescu, Laszlo Zsidó, 2006-03-30 The Romanian conferences in operator theory as they are now commonly called have started in the year 1976 as an annual workshop on operator theory held at the University of Timișoara originally only with Romanian attendance The meeting soon evolved into an international conference with an increasingly larger participation It has been organized jointly initially by the Department of Mathematics of INCREST and by the Faculty of Sciences of the University of Timișoara then since 1990 by the Institute of Mathematics of the Romanian Academy and the Faculty of Mathematics of the West University of Timișoara The venue was usually Timișoara and occasionally Herculane Bucharest or Predeal Since 1986 the conference has been regularly held biannually at the beginning of the summer The 19th Conference on Operator Theory OT 19 took place between June 27th and July 2nd 2002 at the West University of Timișoara It is a pleasure to acknowledge the considerable financial support received through the programme EURROMAT of the European Community under contract ICA1 CT 2000 70022 Partial support has also been provided by the Romanian Ministry of Education Research and Youth grants CERES 152 2001 and 153 2001 The full programme of the conference is included in the sequel It is worth mentioning also a special event that has taken place during the conference professor Israel Gohberg has been awarded the title of Doctor Honoris Causa of the West University of Timișoara      *Scientific and Technical Aerospace Reports* , 1970      **Harmonic Analysis in Operator Algebras and its Applications to Index Theory and Topological Solid State Systems** Hermann Schulz-Baldes, Tom Stoiber, 2022-12-31 This book contains a self consistent treatment of Besov spaces for dynamical systems based on the Arveson spectrum and Fourier multipliers Generalizing classical results by Peller spaces of Besov operators are then characterized by trace class properties of the associated Hankel operators lying in the  $W$  crossed product algebra These criteria allow to extend index theorems to such operator classes This in turn is of

great relevance for applications in solid state physics in particular Anderson localized topological insulators as well as topological semimetals The book also contains a self contained chapter on duality theory for R actions It allows to prove a bulk boundary correspondence for boundaries with irrational angles which implies the existence of flat bands of edge states in graphene like systems This book is intended for advanced students in mathematical physics and researchers alike

Algebraic Methods in Operator Theory Raul E. Curto, Palle E.T. Jorgensen, 2012-12-06 The theory of operators stands at the intersection of the frontiers of modern analysis and its classical counterparts of algebra and quantum mechanics of spectral theory and partial differential equations of the modern global approach to topology and geometry of representation theory and harmonic analysis and of dynamical systems and mathematical physics The present collection of papers represents contributions to a conference and they have been carefully selected with a view to bridging different but related areas of mathematics which have only recently displayed an unexpected network of interconnections as well as new and exciting cross fertilizations Our unifying theme is the algebraic view and approach to the study of operators and their applications The complementarity between the diversity of topics on the one hand and the unity of ideas on the other has been stressed Some of the longer contributions represent material from lectures in expanded form and with proofs for the most part However the shorter papers as well as the longer ones are an integral part of the picture they have all been carefully refereed and revised with a view to a unity of purpose timeliness readability and broad appeal Raul Curto and Palle E T

*Generalized Functions, Operator Theory, and Dynamical Systems* Ioannis Antoniou, Gunter Lumer, 2021-02-25 Nobel prize winner Ilya Prigogine writes in his preface Irreversibility is a challenge to mathematics which leads to generalized functions and to an extension of spectral analysis beyond the conventional Hilbert space theory Meeting this challenge required new mathematical formulations obstacles met and largely overcome thanks primarily to the contributors to this volume This compilation of works grew out of material presented at the Hyperfunctions Operator Theory and Dynamical Systems symposium at the International Solvay Institutes for Physics and Chemistry in 1997 The result is a coherently organized collective work that moves from general widely applicable mathematical methods to ever more specialized physical applications Presented in two sections part one describes Generalized Functions and Operator Theory part two addresses Operator Theory and Dynamical Systems The interplay between mathematics and physics is now more necessary than ever and more difficult than ever given the increasing complexity of theories and methods
