chemistry is an interdisciplinary science which continues to grow at a rapid pace. Although there is continued interest in synthetic and structural studies, the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis, synthetic organic chemistry, and also in the development of new materials. This Specialist Periodical Report aims to reflect these current interests, reviewing progress in theoretical organometallic chemistry, main group chemistry, the lanthanides, and all aspects of transition metal chemistry. Volume 29 covers literature published during 1999.

Nuclear Magnetic Resonance G A Webb, 2007-10-31. As a spectroscopic method, Nuclear Magnetic Resonance (NMR) has seen spectacular growth over the past two decades, both as a technique and in its applications. Today the applications of NMR span a wide range of scientific disciplines, from physics to biology to medicine. Each volume of Nuclear Magnetic Resonance comprises a combination of annual and biennial reports which together provide comprehensive coverage of the literature on this topic. This Specialist Periodical Report reflects the growing volume of published work involving NMR techniques and applications, in particular NMR of natural macromolecules, which is covered in two reports: NMR of Proteins and Acids, and NMR of Carbohydrates, Lipids, and Membranes. For those wanting to become rapidly acquainted with specific areas of NMR, this title provides unrivalled scope of coverage. Seasoned practitioners of NMR will find this an invaluable source of current methods and applications. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist with regular, in-depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is similar, and publication is on an annual or biennial basis.

Chemical Modelling Alan Hinchliffe, 2007-10-31. Chemical Modelling: Applications and Theory comprises critical literature reviews of molecular modelling, both theoretical and applied. Molecular modelling in this context refers to modelling the structure, properties, and reactions of atoms, molecules, and materials. Each chapter is compiled by experts in their fields and provides a selective review of recent literature. With chemical modelling covering such a wide range of subjects, this Specialist Periodical Report serves as the first port of call to any chemist, biochemist, materials scientist, or molecular physicist needing to acquaint themselves with major developments in the area. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist with regular, in-depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is similar, and publication is on an annual or biennial basis. Current subject areas covered are: Amino Acids, Peptides, and Proteins; Carbohydrate Chemistry; Catalysis; Chemical Modelling: Applications and Theory; Electron Paramagnetic Resonance; Nuclear Magnetic Resonance; Organometallic Chemistry; Organophosphorus Chemistry; Photochemistry; and Spectroscopic Properties of Inorganic and Organometallic Compounds. From time to time, the series has altered according to the fluctuating degrees of activity in the

various fields but these volumes remain a superb reference point for researchers

Carbohydrate Chemistry R. J. Ferrier, 2000 Carbohydrate Chemistry provides review coverage of all publications relevant to the chemistry of monosaccharides and oligosaccharides in a given year The amount of research in this field appearing in the organic chemical literature is increasing because of the enhanced importance of the subject especially in areas of medicinal chemistry and biology In no part of the field is this more apparent than in the synthesis of oligosaccharides required by scientists working in glycobiology Glycomedicinal chemistry and its reliance on carbohydrate synthesis is now very well established for example by the preparation of specific carbohydrate based antigens especially cancer specific oligosaccharides and glycoconjugates Coverage of topics such as nucleosides amino sugars alditols and cyclitols also covers much research of relevance to biological and medicinal chemistry Each volume of the series brings together references to all published work in given areas of the subject and serves as a comprehensive database for the active research chemist Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis

Raphael Madonna and Child Oil Painting: A Forensic Analytical Evaluation Howell G. M. Edwards, 2024-10-22 This book
presents a comprehensive forensic analysis of an oil painting depicting a Madonna and Child in a tondo format previously
thought to be a Victorian copy Detailed historical and scientific studies confirm that this painting was in fact created by
Raphael around 1512 as a study for his renowned Sistine Madonna commissioned by Pope Julius II as an altarpiece for the
monastic church of San Sisto in Piacenza The painting underwent rigorous forensic examination combining historical
research with both invasive and non invasive scientific imaging techniques The analysis utilized advanced physical and
chemical instrumentation to determine the painting's authenticity and accurate chronological placement A comparative
review of published chemical analyses of pigments dyes and substrates used in Raphael's works from collections worldwide is
included Additionally this study explores the innovative use of artificial intelligence AI for facial comparison between the
figures in the tondo painting the Sistine Madonna and other Raphael artworks These AI generated insights provide novel
information about the identities of Raphael's models and shed light on his working techniques as well as those of his
associates Organophosphorus Chemistry D. W. Allen, John C. Tebb, 2001 A concise but comprehensive annual survey of a
vast field of study enabling the reader to rapidly keep abreast of the latest developments in this specialist area
