Speech And Reading A Comparative Approach:

Speech and Reading Beatrice de Gelder, Jose Morais, 2017-11-01 Originally published in 1995 this collection of papers introduced a new dimension to the understanding of reading by focusing on the relation between spoken and written language processing New perspectives on speech and reading are introduced by highlighting aspects of the two linguistic skills that had received little attention in the past The comparative perspective adopted in this collection presents an innovative focus on speech and the acquisition of alphabetic reading skill Major new sources of evidence are discussed like reading in nonconventional input modalities braille reading and speech processing in lip reading Contributors also discuss the reading process in non alphabetic orthographies and the specifics of the reading acquisition problem in logographic or mixed writing systems like Chinese and Japanese and their relations to underlying speech representations A central concern of all chapters is the role of phonological processes in different modalities and writings systems and at different stages in the reading acquisition process Drawing on expertise of the contributors the book presents a novel and varied view of the achievements the promises and the challenges facing the researcher once the intimate link between speech and reading comes to the foreground *Speech and Reading* Gelder/Mor, 1995-11-01

Handbook of Children's Literacy Terezinha Nunes, Peter Bryant, 2013-03-09 PETER BRYANT TEREZINHA NUNES The time that it takes children to learn to read varies greatly between different orthographies as the chapter by Sprenger Charolles clearly shows and so do the difficulties that they encounter in learning about their own orthography Nevertheless most people who have the chance to learn to read do in the end read well enough even though a large number experience some significant difficulties on the way Most of them eventually become reasonably efficient spellers too even though they go on make spelling mistakes at any rate if they are English speakers for the rest of their lives So the majority of humans plainly does have intellectual resources that are needed for reading and writing but it does not always find these resources easy to marshal What are these resources Do any of them have to be acquired Do different orthographies make quite different demands on the intellect Do people differ significantly from each other in the strength and accessibility of these resources If they do are these differences an important factor in determining children's success in learning to read and write These are the main questions that the different chapters in this section on Basic Processes set out to answer

figures in the field The Cambridge Handbook of Literacy David R. Olson, Nancy Torrance, 2009-02-16 This volume demonstrates how literacy is more than learning to read and write Literacy creates communities organizes personal and social lives makes possible civil society and the rule of law and underwrites the commitment of both modern and developing societies to universal education and ever higher levels of literate competence Everything that is involved in being and becoming literate is the concern of this interdisciplinary group of distinguished scholars *Dyslexia: Advances in Theory and Practice* I. Lundberg, Finn Egil Tønnessen, Ingolv Austad, 2012-12-06 A balanced view of recent research on reading disability is presented by leading international scholars representing various subdisciplines of psychology and allied sciences The volume provides researchers graduate students educators and other professionals with up dated and practical useful knowledge of and insights into the latest theories and findings of the nature and causes of reading disability Rational guidelines for assessment prevention and intervention are also provided based on such concepts as phonological and orthographical processing automaticity and metacognition Several chapters are written without technical terminology yet with scientific rigor and should be readable by a wide audience Issues in Computer-Adaptive Testing of Reading Proficiency Micheline Chalhoub-Deville, 1999 The focus of this book is computer based assessment of the receptive skills

The Untold Story of the Talking Book Matthew Rubery, 2023-01-18 A history of audiobooks from entertainment rehabilitation for blinded World War I soldiers to a twenty first century competitive industry Histories of the book often move straight from the codex to the digital screen Left out of that familiar account are nearly 150 years of audio recordings Recounting the fascinating history of audio recorded literature Matthew Rubery traces the path of innovation from Edison s recitation of Mary Had a Little Lamb for his tinfoil phonograph in 1877 to the first novel length talking books made for blinded World War I veterans to today s billion dollar audiobook industry The Untold Story of the Talking Book focuses on the social impact of audiobooks not just the technological history in telling a story of surprising and impassioned conflicts from controversies over which books the Library of Congress selected to become talking books yes to Kipling no to Flaubert to debates about what defines a reader Delving into the vexed relationship between spoken and printed texts Rubery argues that storytelling can be just as engaging with the ears as with the eyes and that audiobooks deserve to be taken seriously They are not mere derivatives of printed books but their own form of entertainment We have come a long way from the era of sound recorded on wax cylinders when people imagined one day hearing entire novels on mini phonographs tucked inside their hats Rubery tells the untold story of this incredible evolution and in doing so breaks from convention by treating audiobooks as a distinctively modern art form that has profoundly influenced the way we read Praise for The Untold Story of the Talking Book If audiobooks are relatively new to your world you might wonder where they came from and where they re going And for general fans of the intersection of culture and technology The Untold Story of the Talking Book is a fascinating read Neil Steinberg Chicago Sun Times Rubery explores 150 years of the audio format with an imminently accessible style

touching upon a wide range of interconnected topics Through careful investigation of the co development of formats within the publishing industry Rubery shines a light on overlooked pioneers of audio Rubery s work succeeds in providing evidence to move beyond the reductive debate on whether audiobooks really count as reading and establishes the format s rightful place in the literary family Mary Burkey Booklist starred review [Cross-Linguistic Study of Acquired Reading Disorders](#) Prathibha Karanth,2012-12-06 The acquisition of reading the teaching of reading and the difficulties encountered have been of substantial interest to a wide range of researchers and practitioners for centuries Given the increasing centrality of literacy in modern life they are now of even greater interest to an ever widening base of professionals The study of the acquired reading disorders though in existence for over a century received enormous impetus with the publication of a seminal paper by Marshall and Newcombe in 1966 leading to neuropsychological model building of reading Over the last 30 years within the single case study design there has been extensive and exceedingly fine grained research on individuals with acquired disorders of reading in an attempt to establish the validity of these models of reading and the human brain In addition these models have had considerable influence on models of the acquisition of reading in children and their concomitant difficulties Much of this research has been in readers of the alphabetic scripts particularly the opaque English script During the last decade or so there has been increasing evidence particularly in research on reading acquisition that what is true of alphabetic scripts like English may not be universally true of all of the scripts of the world This has led to considerable research into the process of learning to read and write and on the factors affecting reading which are the touchstone of the models within broader cross linguistic and cross cultural perspectives **Handbook of Early Childhood Literacy** Nigel Hall, Joanne Larson, Jackie Marsh, 2003-10-18 This volume examines early literacy research on a global scale and puts social cultural and historical analyses in the front seat without losing sight of individual and family level matters in the process It is comprehensive ground breaking and provocative and should help literacy researchers to think differently about the field Marjorie Faulstich Orellana School of Education and Social Policy Northwestern University No other publication that I am aware of brings together views from such diverse disciplines contributing to a comprehensive statement about early childhood literacy The Handbook not only reviews the current field of situated literacy but presents some important and exciting new research It is a significant resource that promises to become a landmark text Eve Bearne University of Cambridge Faculty of Education U K This handbook brings together an astonishing array of writers who explore contemporary political cultural and cognitive understandings of early childhood literacy Literacy and literacy acquisition are broadly defined here to encompass not just traditional notions of reading and writing but multimodalities multiliteracies and critical literacies It is rich and comprehensive an invaluable resource for scholars educators and students of early childhood literacy Elsa Auerbach Professor of English University of Massachusetts Boston This book is unique in its broad consideration of topics and its global focus I particularly appreciate how the editors have situated current research in an historical context

They have also included development issues pedagogy research and the newest areas of interest critical literacy and popular culture Diane Barone University of Nevada Reno In recent years there has been a virtual revolution in early childhood studies with a mass of books and papers seeking to re examine and reposition childhood At the same time an equally significant area has developed within literacy studies reflecting a growing interest in the nature of literacy as a socially situated phenomenon There is increased interest in literacy as a multimodal concept in which symbolic meaning is a central concept rather than more conventional and narrower notions of literacy The Handbook of Early Childhood Literacy is central in providing access to all these different perspectives The Handbook offers a way through the vast diversity of publications on early childhood literacy by providing comprehensive and up to date reviews of research and thinking in early childhood literacy The arrangement of chapters reflects a contemporary perspective on research into early childhood literacy Major sections include the global world of early childhood literacy childhood literacy and family community and culture the development of literacy in early childhood pedagogy and early childhood literacy and researching early childhood literacy Contributions by leading authorities focus on literacy as a socially situated and global experience one that is evolving in relation to changes in contemporary culture and technological innovation

Cognitive and Neural Foundations of Chinese Reading Denise Hsien Wu, 2025-08-22 This book provides a comprehensive and concise introduction of experiments on contemporary issues of language processing and the brain It covers a wide range of neurolinguistic and neuroscience topics including but not limited to word recognition reading acquisition and dyslexia in typically developed children foreign language learners and deaf people comprehension of sentences and fictional narratives the interplay of language processing acquisition with other cognitive domains and aging of language comprehension and Chinese reading This book showcases the significance of empirical studies on language and cognitive processing particularly those emerging from the Taiwan research community to illuminate the intricate nature of the language faculty enabled by the sophisticated computations of the brain This book informs readers of crucial issues in the neurolinguistic literature and advances in neuroimaging technology and provides perspectives inspired by evolution and neuroscience

Learning to Read and Write Margaret Harris, Giyoo Hatano, 1999-05-27 For many years the development of theories about the way children learn to read and write was dominated by studies of English speaking populations As we have learned more about the way that children learn to read and write other scripts whether they have less regularity in their grapheme phoneme correspondences or do not make use of alphabetic symbols at all it has become clear that many of the difficulties that confront children learning to read and write English specifically are less evident or even non-existent in other populations At the same time some aspects of learning to read and write are very similar across scripts The unique cross linguistic perspective offered in this book including chapters on Japanese Greek and the Scandinavian languages as well as English shows how the processes of learning to read and spell are affected by the characteristics of the writing system that children are learning to master

Chinese Children's Reading Acquisition Wenling Li, Janet S. Gaffney, J. Packard, 2012-12-06 Published research and conference presentations on the Chinese language in the last decade have tended to focus on adult language processing This book provides a comprehensive resource for the critical discussion of major issues in learning to read Chinese from a child acquisition perspective The combined contributions from researchers in Asian studies linguistics psycholinguistics psychology cognitive psychology reading and education inform international comparative studies of literacy by making apparent the features of the

Chinese culture language writing system and pedagogy that may facilitate or impede the acquisition of literacy **Reading Development in Chinese Children** Catherine McBride-Chang, Hsuan-Chih Chen, 2003-12-30 This text reviews both similarities and unique cultural linguistic and script differences of Chinese relative to alphabetic reading and even across Chinese regions Chinese reading acquisition relies upon children's strongly developing analytic skills as highlighted here These 16 chapters present state of the art research on diverse aspects of Chinese children's reading development This edited volume presents research on Chinese children's reading development across Chinese societies Authors from China Hong Kong Singapore and Taiwan among others present the latest findings on how Chinese children learn to read Reading acquisition in Chinese involves some parameters typically not encountered in some other orthographies such as English For example Chinese readers in different regions might speak different mutually unintelligible languages be taught to read with or without the aid of a phonetic coding system and learn different scripts This book both implicitly and explicitly considers these and other contextual issues in relation to developmental and cognitive factors involved in Chinese literacy acquisition One of the clearest themes to emerge from this volume is that across regions Chinese children despite lack of explicit teaching of phonetic or semantic character components learn to read largely by integrating visible print sound and print meaning connections Rather than learning to read Chinese characters by rote as is sometimes mistakenly believed these children are analytic learners Chapters in this book also cover such topics as Chinese children's reading comprehension cognitive characteristics of good and poor readers and reading strategies of bilingual and bicultural readers This book is a useful reference for anyone interested in understanding either developing or skilled reading of Chinese or for those interested in literacy learning across cultures **Reading acquisition of Chinese as a second/foreign language** Linjun Zhang, Zaizhu Han, Yang Zhang, 2023-07-12 **Cognition on Cognition** Jacques Mehler, Susana Franck, 1995 This broad ranging volume includes a series of articles that were originally published as a special issue of Cognition produced to celebrate the 50th volume of the journal This broad ranging volume includes a series of articles that were originally published as a special issue of Cognition produced to celebrate the 50th volume of the journal Written by some of the foremost scientists studying different aspects of the mind the articles review progress achieved over the past twenty five years in the main areas of the discipline They provide a unique record of what is happening today in the field of cognition with an added historical perspective that is often absent from other volumes that seek to cover so much ground The chapters have been arranged in sections on Neuropsychology Thinking and Language and Perception These thematic areas deal with theoretical aspects ranging from the status of explanations in cognitive science to evolutionary accounts of human cognitive faculties to the way in which humans use these faculties to reason about perceive and interact with their environment and each other There are also contributions dealing with the abilities of young infants and articles that relate behaviors to their underlying neural substrata
