Speech Recognition: Invited Papers Presented at the 1974 IEEE Symposium, D. Raj Reddy, Ed. (New York: Academic, 1975, 542 pp., \$17.00). *Reviewed by Jared J. Wolf.*

This book is the result of the IEEE Symposium on Speech Recognition, held at Carnegie-Mellon University, Pittsburgh, PA, April 15-19, 1974. Most of the contributed papers appeared in the *Symposium Proceedings* [1], and many of them appeared in a Special Issue of this TRANSACTIONS in February 1975. This book contains the 20 invited papers, not available elsewhere, and the keynote address by Gunnar Fant.

The book is divided into five subject areas, corresponding to the topics of the five days of the conference. Each section is headed by a tutorial paper on the subject area. These subject areas and the authors represented therein are:

- 1) Systems (Newell; Martin; Demow; Newberg)
- 2) Parameter and Feature Extraction (Schafer and Rabiner; Gentileman; Morf; Kallath, and Dickenson; Makhoul; Atal; Markel and Gray)
- 3) Acoustic-Phonetics (Broad and Shoup; Cohen and Mercer; Klatt)
- 4) Syntax and Semantics (Woods; Robinson; Hayes and Simon)

5) Systems Organization (Reddy and Erman; Lesser; Barnett; Baker)

These papers cover virtually all of the topics of relevance to the general problem of speech recognition. (The only omission that springs to mind is prosody.) Particularly noteworthy are the tutorial papers that begin each section. There is little description of specific systems or specific implementations; most of the papers are concerned with the intellectual framework on which systems are built.

Although isolated or discrete word recognition is an important subtopic of speech recognition, only one paper (by Martin) deals with it in any depth. The remainder address the more general problems of continuous speech recognition and understanding. (Most of the papers are by people affiliated with the recent ARPA Speech Understanding Project.) In fact, this book contains what is probably the first comprehensive accounts of specifically how higher level linguistic constraints can be applied to the speech recognition problem.

The only lack that one feels upon reading through this book (and it is one for which the Editor and the authors can hardly be blamed) is that it leaves uncovered all that has happened in this rapidly moving field in the meantime, the latter two and a half years of the ARPA Speech Understanding Project and the corresponding work done elsewhere. However, that is the province of later books. There is little in this volume that is obsolete; one can hardly hope to enter this field without being familiar with its contents.

Advances in Probabilistic and Other Parsing Technologies H. Bunt, Anton Nijholt, 2000-10-31 Parsing technology is concerned with finding syntactic structure in language In parsing we have to deal with incomplete and not necessarily accurate formal descriptions of natural languages Robustness and efficiency are among the main issues in parsing Corpora can be used to obtain frequency information about language use This allows probabilistic parsing an approach that aims at both robustness and efficiency increase Approximation techniques to be applied at the level of language description parsing strategy and syntactic representation have the same objective Approximation at the level of syntactic representation is also known as underspecification a traditional technique to deal with syntactic ambiguity In this book new parsing technologies are collected that aim at attacking the problems of robustness and efficiency by exactly these techniques the design of probabilistic grammars and efficient probabilistic parsing algorithms approximation techniques applied to grammars and parsers to increase parsing efficiency and techniques for underspecification and the integration of semantic information in the syntactic analysis to deal with massive ambiguity The
