Automatic Speech Signal Analysis for Clinical Diagnosis and Assessment of Speech Disorders Ladan Baghai-Ravary, Steve W. Beet, 2012-08-09 Automatic Speech Signal Analysis for Clinical Diagnosis and Assessment of Speech Disorders provides a survey of methods designed to aid clinicians in the diagnosis and monitoring of speech disorders such as dysarthria and dyspraxia with an emphasis on the signal processing techniques statistical validity of the results presented in the literature

and the appropriateness of methods that do not require specialized equipment rigorously controlled recording procedures or highly skilled personnel to interpret results Such techniques offer the promise of a simple and cost effective yet objective assessment of a range of medical conditions which would be of great value to clinicians The ideal scenario would begin with the collection of examples of the clients speech either over the phone or using portable recording devices operated by non specialist nursing staff The recordings could then be analyzed initially to aid diagnosis of conditions and subsequently to monitor the clients progress and response to treatment The automation of this process would allow more frequent and regular assessments to be performed as well as providing greater objectivity
