Vastenburger, 2012-11-14 Geotextile encapsulated sand elements are three dimensional systems manufactured from textile materials non woven materials or combinations of textile and non woven materials that are filled with sand on site These systems are relatively new and the number of applications is growing in river and coastal engineering Quite often Geosystems are mentioned as a possible solution but planners designers and contractors feel rather hesitant about the application of geotextile encapsulated sand elements due to a lack of experience and adequate design rules The use of geosystems has the advantage that local material can be applied and that no expensive quarry stone needs to be extracted and transported from the mountains to the site Compared to traditional construction methods with quarry stone the application of geotextile sand filled elements may add considerable operational advantages to the execution of marine works and may offer attractive financial opportunities In the application of geotextile encapsulated sand elements however proper attention should be paid to the laying down of different responsibilities of the parties in the contract In *Geosystems Design Rules and Applications* four types of geotextile sand elements are distinguished each with specific properties geo bags geo mattresses geotextile tubes and geotextile containers The focus is on the use of geosystems filled with sand as a construction in river and coastal engineering Geosystems filled with sludge are not covered The chapters Introduction and General design aspects are followed by four chapters of the same structure dealing with the various systems Each of these four chapters starts with a general description and applications and ends with a calculation example Design aspects are dealt with in the remaining paragraphs *Geosystems Design Rules and Applications* is based on research commissioned by the Dutch Rijkswaterstaat and Delft Cluster The realisation of the Dutch version was coordinated by a CUR committee The English version is a translation of the Dutch version CUR publication 217 However new developments have been added and the text was checked once again and improved *Geosystems Design Rules and Applications* is an essential reference for professionals and academics interested in River and Coastal Engineering but aims also at those interested in Geotechnical Engineering *Sand Dunes of the Northern Hemisphere* Qi Lu, Mahesh K. Gaur, Victor R. Squires, 2023-03-10 This book in two volumes and with a foreword by the renowned Professor M A J Williams draws on evidence from coastal and

inland regions including desert dunes wind blown dust river and lake sediments glacial moraines plant and animal fossils isotope geochemistry soils and prehistoric archaeology to better understand the genesis and development of dunes systems in selected northern hemisphere sand dunes from Asia Africa and the Middle East regions The collection of research papers and case studies that are presented in this book provide the reader with a wealth of information about the distribution and types of sand dunes and an insight into the complexity of sand dune formation migration and management Research in many countries across the northern hemisphere shows that dunes whether coastal or inland are under pressure around the world Much of the pressure comes from human activities and the anthropogenic disturbance when coupled with global warming and alterations to the amount frequency and temporal distribution of precipitation could lead to more serious management challenges in the future There is much that we still need to find out about the origin genesis and development of sand dunes so that they can be managed better The difficult and complex questions being repeatedly raised can be answered only by interdisciplinary endeavours Geomorphologists geologists palaeontologists climatologists ecologists and others can work together on research projects that better define the origin evolution and development of dunes both inland and along the coasts Many chapters in this book attempt to reconstruct past climatic changes in deserts and their margins at a variety of scales in space and time in the expectation that such information might assist in preparing us for future global warming and drying
