lexical analyses and word disambiguation The introduction provides the theoretical background against which the studies are undertaken All studies are empirical in nature they either report acoustic analyses production or perception experiments or corpus based analyses Taken together the results of all studies pose a challenge to maintaining a stressless analysis of Papuan Malay At the same time the type of word stress that emerges from the reported results is unlike its common theoretical conception and therefore requires more work to be integrated in prosodic theory Given the controversy on word stress in Indonesian languages the results are always discussed and carefully interpreted in a cross linguistic context In this way the current thesis extends and deepens our knowledge and understanding of word stress in prosodic theory
