

Thuphri - Alien Species

Thuphri are carnivorous pack animals that live in sparsely forested regions. They are highly intelligent & social creatures that follow an Alpha/Beta ethology. Due to their high intelligence, they can form successful alliances with other species such as humans, and in rare cases can be ridden as a mount. Wild Thuphri are extremely dangerous, however if befriended, can become invaluable allies. Thuphri are their planet's apex predators, humans attempted to contest this, but failed.

When agitated, the neck hairs flare out and mandibles open for fear-factor. Otherwise, the mandibles are neatly tucked in the upward position.

There is no hair grown around the head, an evolutionary feature similar to cetaceans.

Females seek out and consider the number of scars on a male's shoulder to determine their strength and potential as a mate. Males wear their shoulder scars (and all scars) as proudly badges.

The two large antennae on the tail help detect mating pheromones along with smell and vibrations.

Thuphri are very effective climbers. Their claws all act as climbing hooks.

Transpecies Design Adrian Parr Zaretsky, Michael Zaretsky, 2024-07-31 In May 2019 the United Nations released the Global Assessment Report on Biodiversity and Ecosystem Services which warned that human activities will drive nearly one million species to extinction in a few decades The primary reasons for this are habitat loss and biodiversity demise caused by changing climate pollution introducing nonindigenous species clearing land over population and consumption Given this situation humans must change course as both human wellbeing and the wellbeing of other than human species are imbricated in one another One way humanity can accomplish the needed transformation is to move beyond an anthropocentric view of life by embracing a transpecies approach that is premised upon interconnected flourishing Transpecies design as outlined in this book offers a new approach to regenerating the natural environment while honoring biodiversity Rather than presenting the human experience as the goal of design transpecies design takes the inextricable linkages connecting living things as both its starting point and end goal As such it moves beyond human experience serving as the fundamental ingredient for making better design processes and decisions This book is essential reading for artists designers and architects as well as students of architecture landscape architecture interior architecture art product design urban design planning environmental philosophy and cultural studies **Species Design by H. Marcum, 2008-05-07 In this book the author explores the shifting philosophical boundaries of modern medical knowledge and practice occasioned by the crisis of quality

of care especially in terms of the various humanistic adjustments to the biomedical model To that end he examines the metaphysical epistemological and ethical boundaries of these medical models He begins with their metaphysics analyzing the metaphysical positions and presuppositions and ontological commitments upon which medical knowledge and practice is founded Next he considers the epistemological issues that face these medical models particularly those driven by methodological procedures undertaken by epistemic agents to constitute medical knowledge and practice Finally he examines the axiological boundaries and the ethical implications of each model especially in terms of the physician patient relationship In a concluding Epilogue he discusses how the philosophical analysis of the humanization of modern medicine helps to address the crisis of care as well as the question of What is medicine The book s unique features include a comprehensive coverage of the various topics in the philosophy of medicine that have emerged over the past several decades and a philosophical context for embedding bioethical discussions The book s target audiences include both undergraduate and graduate students as well as healthcare professionals and professional philosophers This book is the 99th issue of the Series Philosophy and Medicine and it can be considered a crown of thirty years of intensive and dynamic discussion in the field We are completely convinced that after its publication it can be finally said that undoubtedly the philosophy of medicine exists as a special field of inquiry

PCR Primer Design Anton Yuryev, 2008-02-03 In the past decade molecular biology has been transformed from the art of cloning a single gene to a statistical science measuring and calculating properties of entire genomes New high throughput methods have been developed for genome sequencing and studying the cell at different systematic levels such as transcriptome proteome metabolome and other omes At the heart of most high throughput methods is the technique of polymerase chain reaction PCR PCR Primer Design focuses on primer design which is critical to both the efficiency and the accuracy of the PCR With intricate descriptions of basic approaches as well as specialized methods this volume is an exceptional reference for all those involved in studying the genome In PCR Primer Design authors describe basic approaches for PCR primer design in addition to specialized methods These state of the art methods can be used for both genome scale experiments and for small scale individual PCR amplifications This volume will be useful for organizations performing whole genome studies companies designing instruments that utilize PCR and individual scientists geneticists molecular biologists molecular geneticists and more who routinely use PCR in their research

In Defense of an Evolutionary Concept of Health Mahesh Ananth, 2017-11-30 One of the most controversial contemporary debates on the concept of health is the clash between the views of naturalists and normativists Naturalists

argue that although health can be valued or disvalued the concept of health is itself objective and value free In contrast normativists argue that health is a contextual and value laden concept and that there is no possibility of a value free understanding of health This debate has fueled many of the often very acrimonious disputations arising from the claims of health disease and disability activists and charities and the public policy responses to them In responding to this debate Ananth both surveys the existing literature with special focus on the work of Christopher Boorse and argues that a naturalistic concept of health drawing on evolutionary considerations associated with biological function homeostasis and species design is defensible without jettisoning norms in their entirety

On the Nature of Health L.Y Nordenfelt, 2013-03-09 GENERAL INTRODUCTION This study of the concept of health is an attempt to combine central ideas in modern philosophy of medicine with certain results from analytical action theory What emerges from the study is a concept of health based on an action theoretic foundation A person's health is characterized as his ability to achieve his vital goals The general conception is not new This study has been inspired by a number of scholars both ancient and modern The most important influences from the latter have been those of Georges Canguilhem H Tristram Engelhardt Jr Caroline Whitbeck and Ingmar Persson The novel aspect of this book consists of elaborations made to the general conception First the action theoretic platform is analysed in some detail The nature of the ability involved as well as the conditions for having that ability are specified Second the vital goals of man are given considerable attention Some previous attempts to define such vital goals are analysed and criticized A new characterization is proposed in which the vital goals are conceptually linked to the notion of happiness A person's vital goals are such states of affairs as are necessary and together sufficient for his minimal happiness Third a number of consequences of this conception are observed and analysed One issue which is particularly emphasized is that of whether the concept of health is a theoretical or a normative concept
