Species Design:

Transpecies Design Adrian Parr Zaretsky, Michael Zaretsky, 2024-07-31 In May 2019 the United Nations released the Global Assessment Report on Biodiversity and Ecosystem Services which warned that human activities will drive nearly one million species to extinction in a few decades The primary reasons for this are habitat loss and biodiversity demise caused by changing climate pollution introducing nonindigenous species clearing land over population and consumption Given this situation humans must change course as both human wellbeing and the wellbeing of other than human species are imbricated in one another One way humanity can accomplish the needed transformation is to move beyond an anthropocentric view of life by embracing a transpecies approach that is premised upon interconnected flourishing Transpecies design as outlined in this book offers a new approach to regenerating the natural environment while honoring biodiversity Rather than presenting the human experience as the goal of design transpecies design takes the inextricable linkages connecting living things as both its starting point and end goal As such it moves beyond human experience serving as the fundamental ingredient for making better design processes and decisions This book is essential reading for artists designers and architects as well as students of architecture landscape architecture interior architecture art product design urban design planning environmental philosophy and cultural studies

Giger, 1995-08-01 **An Introductory Philosophy of Medicine** James A. Marcum, 2008-05-07 In this book the author explores the shifting philosophical boundaries of modern medical knowledge and practice occasioned by the crisis of quality of care especially in terms of the various humanistic adjustments to the biomedical model To that end he examines the metaphysical epistemological and ethical boundaries of these medical models He begins with their metaphysics analyzing the metaphysical positions and presuppositions and ontological commitments upon which medical knowledge and practice is founded Next he considers the epistemological issues that face these medical models particularly those driven by methodological procedures undertaken by epistemic agents to constitute medical knowledge and practice Finally he examines the axiological boundaries and the ethical implications of each model especially in terms of the physician patient relationship In a concluding Epilogue he discusses how the philosophical analysis of the humanization of modern medicine helps to address the crisis of care as well as the question of What is medicine The book's unique features include a comprehensive coverage of the various topics in the philosophy of medicine that have emerged over the past several decades and a philosophical context for embedding bioethical discussions The book's target audiences include both undergraduate and graduate students as well as healthcare professionals and professional philosophers This book is the 99th issue of the Series Philosophy and Medicine and it can be considered a crown of thirty years of intensive and dynamic discussion in the field We are completely convinced that after its publication it can be finally said that undoubtedly the philosophy of medicine exists as a special field of inquiry

Aging by Design: How New Thinking on Aging Will Change Your Life Theodore

C. Goldsmith, 2012 *Design for Inclusivity* Magda Mostafa, Ruth Baumeister, Mette Ramsgaard Thomsen, Martin Tamke, 2023-09-02 The book provides new perspectives from leading experts examining the role of architects and urbanists in designing for inclusivity in our built environment. By focusing on themes of gender, race, and ethnicity, ability, neurodiversity, age, poverty, and socio-economy, and the non-human, the book tackles the complex challenges that designers and scholars encounter and need to address in their works. The volume offers a diverse compilation of peer-reviewed papers related to architecture for inclusivity in various different formats ranging from visual essays, argumentative papers, and scholastic texts. It presents the notion of availability, a concept which works to challenge the othering inherent in notions of inclusion and accessibility. In its introduction, it presents a critical discourse around the challenges and potentials lying in the design for availability targeted towards a systemic change of our societies. The book is part of a series of six volumes that explore the agency of the built environment in relation to the SDGs through new research conducted by leading researchers. The series is led by editors Mette Ramsgaard Thomsen and Martin Tamke in collaboration with the theme editors: Design for Climate Adaptation: Billie Faircloth and Maibritt Pedersen Zari; Design for Rethinking Resources: Carlo Ratti and Mette Ramsgaard Thomsen; Eds: Design for Resilient Communities: Anna Rubbo and Juan Du; Eds: Design for Health: Arif Hasan and Christian Benimana; Eds: Design for Inclusivity: Magda Mostafa and Ruth Baumeister; Eds: Design for Partnerships for Change: Sandi Hilal and Merve Bedir. Eds: *Proceedings for the Eight Biennial Southern Silvicultural Research Conference* M. Boya Edwards, 2001 Presents the research of 189 investigators studying the patterns: vegetation management, pest management, natural disturbance, biometrics, economics, site productivity, site impacts, ecophysiology, genetics, regeneration, silvicultural systems, stand development, intermediate management. PCR Primer Design Anton Yuryev, 2008-02-03 In the past decade, molecular biology has been transformed from the art of cloning a single gene to a statistical science measuring and calculating properties of entire genomes. New high-throughput methods have been developed for genome sequencing and studying the cell at different systematic levels such as transcriptome, proteome, metabolome, and other omes. At the heart of most high-throughput methods is the technique of polymerase chain reaction (PCR). PCR Primer Design focuses on primer design, which is critical to both the efficiency and the accuracy of the PCR. With intricate descriptions of basic approaches as well as specialized methods, this volume is an exceptional reference for all those involved in studying the genome. In PCR Primer Design, authors describe basic approaches for PCR primer design in addition to specialized methods. These state-of-the-art methods can be used for both genome-scale experiments and for small-scale individual PCR amplifications. This volume will be useful for organizations performing whole-genome studies, companies designing instruments that utilize PCR, and individual scientists, geneticists, molecular biologists, molecular geneticists, and more who routinely use PCR in their research.

In Defense of an Evolutionary Concept of Health Mahesh Ananth, 2017-11-30 One of the most controversial contemporary debates on the concept of health is the clash between the views of naturalists and normativists. Naturalists argue that

although health can be valued or disvalued the concept of health is itself objective and value free In contrast normativists argue that health is a contextual and value laden concept and that there is no possibility of a value free understanding of health This debate has fueled many of the often very acrimonious disputations arising from the claims of health disease and disability activists and charities and the public policy responses to them In responding to this debate Ananth both surveys the existing literature with special focus on the work of Christopher Boorse and argues that a naturalistic concept of health drawing on evolutionary considerations associated with biological function homeostasis and species design is defensible without jettisoning norms in their entirety *Dialectics of Space and Place across Virtual and Corporeal Topographies* June Jordaan, Carl Haddrell, Christine Alegria, 2019-07-22 This volume was first published by Inter Disciplinary Press in 2016 *Dialectics of Space and Place across Virtual and Corporeal Topographies* explores the inter and multi disciplinary subjects of space and place in two parts Part I Virtual topographies of Space and Place is concerned with themes related to immaterial places and Part II Corporeal Topographies of Space and Place explores narratives of real and imagined experiences of places This volume underpinned by an array of philosophical positions provides a foundation for new and critical dialogues on space and place **Medicine from Art to Science** G. Nordenfelt, 2013-03-09 GENERAL INTRODUCTION This study of the concept of health is an attempt to combine central ideas in modern philosophy of medicine with certain results from analytical action theory What emerges from the study is a concept of health based on an action theoretic foundation A person's health is characterized as his ability to achieve his vital goals The general conception is not new This study has been inspired by a number of scholars both ancient and modern The most important influences from the latter have been those of Georges Canguilhem H Tristram Engelhardt Jr Caroline Whitbeck and Ingmar Persson The novel aspect of this book consists of elaborations made to the general conception First the action theoretic platform is analysed in some detail The nature of the ability involved as well as the conditions for having that ability are specified Second the vital goals of man are given considerable attention Some previous attempts to define such vital goals are analysed and criticized A new characterization is proposed in which the vital goals are conceptually linked to the notion of happiness A person's vital goals are such states of affairs as are necessary and together sufficient for his minimal happiness Third a number of consequences of this conception are observed and analysed One issue which is particularly emphasized is that of whether the concept of health is a theoretical or a normative concept The Biopolitics of Human Enhancement James J. Hughes, Steven Umbrello, Cristiano Cali, 2025-03-03 The study of the social implications of human enhancement is an interdisciplinary work that draws from the fields of political science sociology philosophy and bioethics among others It is also a complex and rapidly evolving subject that raises important questions about the potential benefits and risks of these technologies as well as how society should govern and regulate their development and use An in depth exploration of current and future human enhancement technologies this book delves into the specifics of current and emerging human enhancement technologies such as cognitive enhancers brain computer interfaces and genetic engineering discussing the state of the art the limitations and also the technological developments that one can expect in the future and how they can be regulated and used responsibly Medicine Bow-Routt National Forests (N.F.), Thunder Basin National Grassland (N.G.), Rock Creek Integrated Management Project, 2006 Is Nature Ever Evil? Willem B. Drees, 2003 Can nature be evil or ugly or wrong Can we apply moral value to nature From a compellingly original premise under the auspices of major thinkers including Mary Midgley Philip Hefner Arnold Benz and Keith Ward Is Nature Ever Evil examines the value structure of our cosmos and of the science that seeks to describe it Science says editor Willem B Drees claims to leave moral questions to aesthetic and religious theory But the supposed neutrality of the scientific view masks a host of moral assumptions How does an ethically transparent science arrive at concepts of a hostile universe or a selfish gene How do botanists zoologists cosmologists and geologists respond to the beauty of the universe they study reliant as it is upon catastrophe savagery power and extinction Then there are various ways in which science seeks to alter and improve nature What do prosthetics and gene technology cyborgs and dairy cows say about our appreciation of nature itself Surely science in common with philosophy magic and religion can aid our understanding of evil in nature whether as natural catastrophe

disease predatory cruelty or mere cosmic indifference Focusing on the ethical evaluation of nature itself Is Nature Ever Evil re ignites crucial questions of hope responsibility and possibility in nature *Antisense Drug Technology* Stanley T. Human By Nature Peter Weingart,Sandra D. Mitchell,Peter J. Richerson,Sabine Maasen,2013-06-17 Representing a wide range of disciplines biology sociology anthropology economics human ethology psychology primatology history and philosophy of science the contributors to this book recently spent a complete academic year at the Center for Interdisciplinary Research ZiF discussing a plethora of new insights in reference to human cultural evolution These scholars acted as a living experiment of interdisciplinarity in vivo The assumption of this experiment was that the scholars while working and residing

at the ZiF would be united intellectually as well as socially a connection that might eventually enhance future interdisciplinary communication even after the research group had dispersed An important consensus emerged The issue of human culture poses a challenge to the division of the world into the realms of the natural and the cultural and hence to the disciplinary division of scientific labor The appropriate place for the study of human culture in this group's view is located between biology and the social sciences Explicitly avoiding biological and sociological reductionisms the group adopted a pluralistic perspective integrative pluralism that took into account both today's highly specialized and effective subdisciplinary research and the possibility of integrating the respective findings on a case by case basis Each sub group discovered its own way of interdisciplinary collaboration and submitted a contribution to the present volume reflecting one of several types of fruitful cooperation such as a fully integrated chapter a multidisciplinary overview or a discussion between different approaches A promising first step on the long road to an interdisciplinarily informed understanding of human culture this book will be of interest to social scientists and biologists alike
