

Polygenetic hypothesis and the origin of the elements

- Our understanding of nucleosynthesis comes from three sets of observations:
 - (1) the abundance of isotopes and elements in the cosmos;
 - (2) experiments on nuclear reactions that determine what reactions are possible (or probable) under given conditions; and
 - (3) inferences about possible sites of nucleosynthesis and about the conditions that prevail in those sites.
- Two possibilities for formation of the elements:
 - (1) they were formed in the Big Bang itself
 - (2) they were subsequently produced
- Differences between old Population II stars and younger Population I stars suggests the universe has evolved.
- However, no single mechanism could be found to explain the observed abundances of the elements.
