Spectroscopic Analysis of Electron-beam-induced Fluorescence in Hypersonic Helium Flow Mervin E. Hillard (Jr.), 1970 The ability to visualize low density hypersonic helium flow has been substantially improved through the use of a high energy 26 keV electron beam in the Langley 22 inch helium tunnel at a Mach number of about 20 It has been found that the electron beam efficiently excites the test gas to produce visible fluorescence throughout the flow field with a brightness which is dependent upon the local gas density The present investigation involved the spectroscopic analysis of the electron beaminduced fluorescence It was conducted in order to better understand the excitation and emission mechanisms involved and to use this knowledge to improve the visualization technique further Spectrograms of the fluorescence both in the free stream and modelflow fields have been made and the major radiating species have been identified as atomic helium

molecular helium and the molecular nitrogen ion The molecular nitrogen ion was found to be the emitter whose fluorescence enhanced the shock structure Based on the results of this work areas for further work have been identified **Index to the Literature on Spectrochemical Analysis** William Frederick Meggers, 1949

Spectroscopic Analysis Of Gas Mixtures Book Review: Unveiling the Magic of Language

In an electronic era where connections and knowledge reign supreme, the enchanting power of language has been apparent than ever. Its power to stir emotions, provoke thought, and instigate transformation is really remarkable. This extraordinary book, aptly titled "**Spectroscopic Analysis Of Gas Mixtures**," published by a very acclaimed author, immerses readers in a captivating exploration of the significance of language and its profound affect on our existence. Throughout this critique, we will delve to the book's central themes, evaluate its unique writing style, and assess its overall influence on its readership.
