Spectroscopic Membrane Probes Leslie M. Loew, 2018-04-17 The optical spectra of molecular membrane probes can be interpreted in terms of the structure dynamics and the physiological state of the membrane. The general picture we have of membranes and of the properties of the proteins imbedded in them has arguably emerged directly from probe studies over the last 20 years. This work is designed to make these techniques accessible to a broad audience of cell biologist. The techniques discussed revolve primarily around the fluorescence of membrane probes but applications of light absorption and Raman scattering are included. In addition to reviews of the major applications, most chapters include information on required apparatus, experimental design, data analysis, and potential pitfalls.
