Speech Disorders In Children:

Differential Diagnosis and Treatment of Children with Speech Disorder Barbara Dodd, 2013-05-30 Paediatric speech and language therapists are challenged by diminished resources and increasingly complex caseloads. The new edition addresses their concerns. Norms for speech development are given differentiating between the emergence of the ability to produce speech sounds articulation and typical developmental error patterns phonology. The incidence of speech disorders is described for one UK service providing crucial information for service management. The efficacy of service provision is evaluated to show that differential diagnosis and treatment is effective for children with disordered speech. Exploration of that data provides implications for prioritising case loads. The relationship between speech and language disorders is examined in the context of clinical decisions about what to target in therapy. New chapters provide detailed intervention programmes for subgroups of speech disorder delayed development use of atypical error patterns inconsistent errors and development verbal dyspraxia. The final section of the book deals with special populations children with cognitive impairment hearing and auditory processing difficulties. The needs of clinicians working with bilingual populations are discussed and ways of intervention described. The final chapter examines the relationship between spoken and written disorders of phonology.

Severe disruptions in speech or language acquisition have both direct and indirect consequences for child and adolescent development not only in communication but also in associated abilities such as reading and academic achievement that depend on speech and language skills. The Supplemental Security Income SSI program for children provides financial assistance to children from low income resource limited families who are determined to have conditions that meet the disability standard required under law. Between 2000 and 2010 there was an unprecedented rise in the number of applications and the number of children found to meet the disability criteria. The factors that contribute to these changes are a primary focus of this report. **Speech and Language Disorders in Children** provides an overview of the current status of the diagnosis and treatment of speech and language disorders and levels of impairment in the U S population under age 18.

This study identifies past and current trends in the prevalence and persistence of speech disorders and language disorders for the general U S population under age 18 and compares those trends to trends in the SSI childhood disability population
