Speech Science Technology:

Science, technology and art in the spoken expression of meaning Plinio Almeida Barbosa, Sandra Madureira, Åsa Abelin, 2023-08-31 **Speech Dynamics** Felicitas Kleber, Tamara Rathcke, 2024-10-07 The relationship between diachronic change and synchronic variation at the articulatory auditory acoustic and social level is one of the greatest puzzles in the study of language Even though plentiful examples exist to suggest that dynamics of synchronic variation and diachronic change are tightly interconnected a unified theory to account for language change in its relationship to all layers of synchronic variation remains a desideratum This volume compiles new evidence from articulatory acoustic auditory sociolinguistic and phonological analyses of segmental and prosodic data and computational modelling and offers a refreshing theoretical angle on the ongoing debates in language change The volume is divided into three sections each focusing on one aspect of speech dynamics the historical the emerging and the theoretical each making a step toward a unified view of speech dynamics at the interface of synchronic variation and diachronic change The large range of methodologies and theories represented in this book will appeal to scholars from a variety of linguistic fields with an interest in speech dynamics including phoneticians phonologists sociolinguists typologists computational and historical linguists

Committee on Scientific and Technical Information. Panel on Information Sciences Technology, 1966 *Science, technology, and the first amendment : special report.* , *Speech Rhythm in Varieties of English* Robert Fuchs, 2015-09-25 This book addresses the question whether Educated Indian English is more syllable timed than British English from two standpoints production and perception Many post colonial varieties of English which are mostly spoken as a second language in countries such as India Nigeria and the Philippines are thought to have a syllable timed rhythm whereas first language varieties such as British English are characterized as being stress timed While previous studies mostly relied on a single acoustic correlate of speech rhythm usually duration the author proposes a multidimensional approach to the production of speech rhythm that takes into account various acoustic correlates The results reveal that the two varieties differ with regard to a number of dimensions such as duration sonority intensity loudness pitch and glottal stop insertion The second part of the study addresses the question whether the difference in speech rhythm between Indian and British English is perceptually relevant based on intelligibility and dialect discrimination experiments The results reveal that speakers generally find the rhythm of their own variety more intelligible and that listeners can identify which variety a speaker is using on the basis of differences in speech rhythm **Tones in Zhangzhou** Yishan Huang, 2020-01-16 This book explores the nature of tones in Zhangzhou an under described Southern Min variety based on quantitative analyses of data from 21 native speakers It will interest students and linguists studying tone in languages of China and elsewhere in the world in particular as an exemplar in the use of statistical methods to test and establish

phonological categories in language The study finds that realisations of Zhangzhou tones are multidimensional and that Zhangzhou has eight tones overturning previous studies of seven tones based on the preservation of Middle Chinese tonal categories The results presented here also suggest that the nature of Zhangzhou tones is morphological The relationship between sandhi and citation tones is shown to be morphophonemic while the relationship between phrase final and citation tones is allophonic *The Oxford Handbook of the History of Linguistics* Keith Allan, 2013-03-28 Leading scholars examine the history of linguistics from ancient origins to the present They consider every aspect of the field from language origins to neurolinguistics explore the linguistic traditions in different parts of the world examine how work in linguistics has influenced other fields and look at how it has been practically applied **Law Relating to Intellectual Property**

The

Construction of Words Geert Booij, 2018-04-13 This volume focuses on detailed studies of various aspects of Construction Morphology and combines theoretical analysis and descriptive detail. It deals with data from several domains of linguistics and contributes to an integration of findings from various subdisciplines of linguistics into a common model of the architecture of language. It presents applications and extensions of the model of Construction Morphology to a wide range of languages. Construction Morphology is one of the theoretical paradigms in present day morphology. It makes use of concepts of Construction Grammar for the analysis of word formation and inflection. Complex words are seen as constructions that is pairs of form and meaning. Morphological patterns are accounted for by construction schemas. These are the recipes for coining new words and word forms and they motivate the properties of existing complex words. Both schemas and individual words are stored and hence there is no strict separation of lexicon and grammar. In addition to abstract schemas there are subschemas for subclasses of complex words with specific properties. This architecture of the grammar is in harmony with findings from other empirical domains of linguistics such as language acquisition, word processing and language change.
