Novel Machines Joseph Drury, 2017-11-10 Eighteenth century fiction is full of mechanical devices and contrivances Robinson Crusoe uses his gun and compass to master his island and its inhabitants Tristram Shandy's conception is interrupted by a question about a clock and he has his nose damaged at birth by a man midwife's forceps Ann Radcliffe's gothic heroines play musical instruments to soothe their troubled minds In *Novel Machines* however Joseph Drury argues that the most important machine in any eighteenth century novel is the narrative itself Like other kinds of machine a narrative is an artificial construction composed of different parts that combine to produce a sequence of causally linked actions Like other machines a narrative is designed to produce predictable effects and can therefore be put to certain uses Such affinities had been apparent to critics since Aristotle but they began to assume a particular urgency in the eighteenth century as authors sought to organize their narratives according to the new ideas about nature art and the human subject that emerged out of the Scientific Revolution Reading works by Eliza Haywood Henry Fielding Laurence Sterne and Ann Radcliffe *Novel Machines* tracks the consequences of the effort to transform the novel into an Enlightenment machine On the one hand the rationalization of the novel's narrative machinery helped establish its legitimacy such that by the end of the century it could be celebrated as a modern invention that provided valuable philosophical knowledge about human nature On the other hand conceptualizing the novel as a machine opened up a new line of attack for the period's moralists whose polemics against the novel were often framed in the same terms used to reflect on the uses and effects of machines in other contexts Eighteenth century novelists responded by adapting the novel's narrative machinery devising in the process some of the period's most characteristic and influential formal innovations

Advanced Direct Thrust Force Control of Linear Permanent Magnet Synchronous Motor Muhammad Ali Masood Cheema, John Edward Fletcher, 2020-02-13 This book explores the direct thrust force control DTFC of tubular surface mount linear permanent magnet synchronous motors linear PMSMs It presents a detailed account and analysis of several advanced nonlinear control schemes based on the direct thrust control principle to achieve a reduction in steady state ripple in thrust force with faster transient response and describes their experimental validation It also provides rigorous details of the dynamic modelling of linear PMSMs from a control system perspective and demonstrates the superior control performance of the proposed techniques compared to the current state of the art techniques Lastly the book proposes and validates a stator flux observer for sensorless speed estimation comprising a linear state observer and an improved sliding mode component

The Physiology of the Novel Nicholas Dames, 2007-09-27 How did the Victorians read novels Nicholas Dames answers that deceptively simple question by revealing a now forgotten range of nineteenth century theories of the novel a range based in a study of human physiology during the act of reading He demonstrates the ways in which the

Victorians thought they read and uncovers surprising responses to the question of what might have transpired in the minds and bodies of readers of Victorian fiction His detailed studies of novelcritics who were also interested in neurological science combined with readings of novels by Thackeray Eliot Meredith and Gissing propose a vision of the Victorian novel reader as far from the quietly immersed being we now imagine as instead a reader whose nervous system was addressed attacked andsoothed by authors newly aware of the neural operations of their public Rich in unexpected intersections from the British response to Wagnerian opera to the birth of speed reading in the late nineteenth century *The Physiology of the Novel* challenges our assumptions about what novel reading once did and still does to the individual reader and provides new answers to the question of how novels influenced a culture s way of reading responding and feeling **Proceedings of the**

Aggressive Fictions Kathryn Hume, 2012-01-15 A frequent complaint against contemporary American fiction is that too often it puts off readers in ways they find difficult to fathom Books such as Bret Easton Ellis s American Psycho Katherine Dunn s Geek Love and Don DeLillo s Underworld seem determined to upset disgust or annoy their readers or to disorient them by shunning traditional plot patterns and character development Kathryn Hume calls such works aggressive fiction Why would authors risk alienating their readers and why should readers persevere Looking beyond the theory based justifications that critics often provide for such fiction Hume offers a commonsense guide for the average reader who wants to better understand and appreciate books that might otherwise seem difficult to enjoy In her reliable and sympathetic guide Hume considers roughly forty works of recent American fiction including books by William Burroughs Kathy Acker Chuck Palahniuk and Cormac McCarthy Hume gathers attacks on the reader into categories based on narrative structure and content Writers of some aggressive fictions may wish to frustrate easy interpretation or criticism Others may try to induce certain responses in readers Extreme content deployed as a tactic for distancing and alienating can actually produce a contradictory effect for readers who learn to relax and go with the flow the result may well be exhilaration rather than revulsion
