Regulation of Endurance Performance: New Frontiers Alexis R. Mauger,Florentina J. Hettinga,Dominic P. Micklewright,Andrew Renfree,Benjamin Pageaux,Hollie S. Jones,Jo Corbett,2017-11-22 Successful endurance performance requires the integration of multiple physiological and psychological systems working together to regulate exercise intensity in a way that will reduce time taken or increase work done The systems that ultimately limit performance of the task are hotly contested and may depend on a variety of factors including the type of task the environment external influences training status of the individual and a host of psychological constructs These factors can be studied in isolation or inclusively

as a whole body or integrative system A reductionist approach has traditionally been favoured leading to a greater understanding and emphasis on muscle and cardiovascular physiology but the role of the brain and how this integrates multiple systems is gaining momentum However these differing approaches may have led to false dichotomy and now with better understanding of both fields there is a need to bring these perspectives together The divergent viewpoints of the limitations to human performance may have partly arisen because of the different exercise models studied These can broadly be defined as open loop where a fixed intensity is maintained until task disengagement or closed loop where a fixed distance is completed in the fastest time which may involve whole body or single limb exercise Closed loop exercise allows an analysis of how exercise intensity is self regulated i e pacing and thus may better reflect the demands of competitive endurance performance However whilst this model can monitor changes in pacing this is often at the expense of detecting subtle differences in the measured physiological or psychological variables of interest Open loop exercise solves this issue but is limited by its more restrictive exercise model Nonetheless much can be learnt from both experimental approaches when these constraints are recognised Indeed both models appear equally effective in examining changes in performance and so the researcher should select the exercise model which can most appropriately test the study hypothesis Given that a multitude of both internal e g muscle fatigue perception of effort dietary intervention pain etc and external e g opponents crowd presence course topography extrinsic reward etc factors likely contribute to exercise regulation and endurance performance it may be that both models are required to gain a comprehensive understanding Consequently this research topic seeks to bring together papers on endurance performance from a variety of paradigms and exercise models with the overarching aim of comparing examining and integrating their findings to better understand how exercise is regulated and how this may or may not limit performance

Heatstroke Michael G. Simonson, 2009-09-08 HeatStroke Why Canada's Summer Olympic Program Is Failing And How We Can Fix It is Michael Simonson's incisive and passionate diagnosis of Canada's Summer Olympic performances and the disparate nature of amateur sport in Canada He reveals why a country that seemingly dominates at the Winter Olympics is content in putting up with sporting ineptitude at the Summer Olympics In doing so he discovers that Canada's success at the Winter Olympics has more to do with the vision of Canada's winter sport organizations than with the health of the sport system itself But Simonson's expos is written out of love of his country and sport and in the hopes of turning Canadian sport around so all of our athletes have the opportunity to be successful While his book is a tough diagnosis of our sporting ills it also examines Canada's plan for resurgence at the Summer Olympics while offering its own blueprint for success not just in the short term but for many Olympiads to come Examining some of the best practices implemented in Canada's winter sport system HeatStroke provides a made in Canada solution to our summer sporting ills

The 1960 Winter Olympics David C. Antonucci, 2013-11-11 The 1960 Olympic Winter Games were a long shot effort that succeeded beyond the wildest expectations Working in a sparsely populated valley in the Sierra Nevada with only rudimentary facilities organizers created a world class Olympic site in four short years For the only time in Olympic history the venues and athlete residence halls were located in a compact intimate setting that encouraged sportsmanship and interaction between athletes There was elaborate pageantry in the ceremonies and decorations The underdog American ice hockey team won the first ever USA gold medal in that sport American figure skaters swept gold in the individual events Well trained Soviet and Scandinavian athletes dominated the speed skating and cross country skiing events American women proved their mettle in the Alpine skiing events German skiers made surprise upsets in the Nordic combined and ski jumping contests And CBS TV was there to capture the most exciting moments and make groundbreaking live broadcasts to American audiences

Recent Evolutions and Perspectives in Olympic Winter Sports Performance: to PyeongChang and Beyond... Gianluca Vernillo, Nicolas Coulmy, Gregoire P. Millet, 2019-07-19 An evidence based scientific understanding of factors determining Olympic winter sports performance recent changes the evolution in training content and methods the improvement in technology as well as the occurrence of injury and illness is required On one hand this would provide the opportunity to translate research to practice On the other hand to guide the practice of Olympic winter sports with the ultimate goal of improving the performance Certainly the continued evolution of Olympic winter sports has contributed to an enormous accumulation of knowledge evidence and relevant training technologies Sports sciences including physiology conditioning nutrition biomechanics coaching psychology as well as sport technology history and social sciences have much to contribute to the preparation of the athletes in the Olympic winter sports Consequently this Research Topic sought to provide a platform of contributions to set out a comprehensive framework of the components that should be addressed when developing training plans leading to elite Olympic winter sports performance Overall the papers were all directed toward a better understanding of physiological biomechanical and training factors related to different Olympic winter sports disciplines cross country skiing alpine skiing biathlon Nordic combined speed skating snowboarding and ski cross
