Speedbumps And Potholes:

Detection of Potholes and Speedbumps by Monitoring Front Traffic Karthikeyan Nagarajan,Amit Jindal,2019 This article proposes a novel method for detecting potholes and speed bumps by monitoring the front traffic when the road is not visibly seen The existing camera based systems in the car directly scan the road surface and estimate the road profile The main disadvantage of the current technology is that it is not possible to detect the road profile when the road is not clearly visible This can happen in situations when roads are waterlogged or have occluded bumps and in low light conditions In this article the proposed method for detecting potholes or speed bumps by monitoring the vertical movement of the front traffic can enhance the existing algorithm by overcoming the abovementioned disadvantage However the method works only when there is traffic ahead of the system vehicle The method makes level 3 and above autonomous driving more robust in terms of comfort and safety by estimating the road profile in the abovementioned road conditions The method uses an object localization algorithm and optical flow to determine the motion vectors of vehicles The histogram of motion vectors in the vertical direction is calculated and its weighted average is obtained for each frame As a feature extraction process fast Fourier transform FFT is applied to the fixed size queue buffer containing weighted average values to obtain the frequency spectrum which is used as a feature set for classification After feature selection the support vector machine SVM is used to classify whether a pothole road bump has been detected Apart from hardware video stabilization the same classification procedure is applied to static objects in the frame and camera egomotion is detected This is done to avoid false positives due to camera movement when the system vehicle is moving over a pothole or a speed bump The developed algorithm is validated with the manually collected dataset and the results and the analysis are presented here Abstract page 1

The North American Idea Robert A. Pastor, 2011-07-21 In its first seven years the North American Free Trade Agreement NAFTA tripled trade and quintupled foreign investment among the U S Mexico and Canada increasing its share of the world economy In 2001 however North America peaked Since then trade has slowed among the three manufacturing has shrunk and illegal migration and drug related violence have soared At the same time Europe caught up and China leaped ahead In The North American Idea eminent scholar and policymaker Robert A Pastor explains that NAFTA's mandate was too limited to address the new North American agenda Instead of offering bold initiatives like a customs union to expand trade leaders of the three nations thought small Interest groups stalemated the small ideas while inhibiting the bolder proposals and the governments accomplished almost nothing To overcome this resistance and reinvigorate the continent the leaders need to start with an idea based on a principle of interdependence Pastor shows how this idea once woven into the national consciousness of the three countries could mobilize public support for continental solutions to problems like infrastructure and immigration that have confounded each nation working on its own Providing essential historical context and challenging readers to view the continent in a new way The North American Idea combines an expansive vision with a detailed blueprint for a more integrated dynamic and equitable North America

The Speed of Change Jan-Bart Gewald, Sabine Luning, Klaas van Walraven, 2009-07-31 In the early 1900s the motor vehicle car bus lorry or motor cycle was introduced in sub Saharan Africa Initially the plaything and symbol of colonial domination the motor vehicle transformed the economic and social life of the continent Indeed the motor vehicle is arguably the single most important factor for change in Africa in the twentieth century A factor for change that thus far has been neglected in research and literature Yet its impact extends across the totality of human existence from ecological devastation to economic advancement from cultural transformation to political change through to a myriad of other themes This edited volume of eleven contributions by historians anthropologists and social and political scientists explores aspects of the social history and anthropology of the motor vehicle in Africa
