Brain Words J. Richard Gentry, Gene P. Ouellette, 2024-11-28 Gentry and Ouellette are cannonballing into the reading research pool they're making waves and these waves are moving the field of reading forward From the foreword by Mark Weakland Super Spellers In this second edition the authors have written a practical and fascinating resource that helps connect the theory and research of the neurological reading circuitry to classroom practice Molly Ness teacher educator author consultant A lot has changed since the original publication of Brain Words The first edition was very much a call for change and change has indeed happened While the science of reading has made real and substantive change within education there unfortunately remain too many misunderstandings and misinterpretations of what the science of reading is and stubborn resistance to all it has to offer Now more than ever it is vital that we work towards an understanding of the science of reading and what it has to say about teaching our students how to read Written for beginning or seasoned teachers homeschoolers teacher educators as well as parents who want to fully engage in their child's literacy development this updated and highly readable new edition presents brain science reading research and theory in ways that can be understood and directly applied in teaching ultimately leading to efficacious science of reading based literacy instruction Gentry and Ouellette show how an understanding of the science of reading can shape teaching to help make all students literate Building on their science of reading based framework of brain words dictionaries in the brain where students store and access word spelling pronunciation and meaning the authors offer a wealth of information to transform your thinking and practice They offer an updated review of models of reading developmental theory and brain research that help explain the reading brain a new exploration of how oral language provides the foundation for learning to read and write and how elements of oral language directly contribute to literacy learning throughout the school years an evolving critique of classroom practices that aren't as effective as once believed explicit guidance on how spelling can be used to teach the critical skill of word reading a deepened understanding of dyslexia through the lens of the science of reading With the insights and strategies in Brain Words you can meet your students where they are and ensure that more of them read well think well and write well

Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be

acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions Most children learn to read and spell their language at the same time thus the co ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition Lack of progress in either reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research
