Making Russia and Turkey Great Again? Norman A. Graham, Folke Lindahl, Timur Kocaoglu, 2021-03-19 This study analyzes theoretically and empirically the background of the rise to power of Vladimir Putin in Russia and Recep Tayyip Erdogan in Turkey It situates this analysis in the contexts of the historical assessment of the fragility of liberal democracy and the persistence and growth of authoritarianism populism and dictatorship in many parts of the world The authors argue that the question whether Putin and Erdogan can make Russia and Turkey great again is hard to confirm personal ambition for power and wealth is certainly key to an understanding of both rulers They each squandered opportunities to build from free and fair democratic electoral legitimacy and economic progress The prospect for restored national greatness depends on how they can handle the economic and political challenges they now face and will continue to face in the near future in a climate of global pandemic and economic recession Both rulers so far have succeeded in maintaining and increasing their powers and influence in their respective regions but neither has made real contributions to regional stability and order Chaos seems to be growing and the EU and the U S thus far seem unable to provide coherent responses to mitigate the impact of their adventurism and disruption

Climate and Geo-Sciences A.L. Berger, S. Schneider, J.Cl. Duplessy, 2012-12-06 It has been widely recognized recently that in order to make scientific progress on large and important problems eg carbon dioxide effects on climate

viability of various sites for nuclear waste disposal etc it is necessary to integrate knowledge from wide ranging sets of disciplines This is certainly true in the climate sciences for progress in understanding the cause of the ice ages or the effects of industrial pollution on the future climate or even the likelihood of severe climatic consequences in the aftermath of nuclear war All require state of the art input from many geoscience disciplines climatology oceanography meteorology chemistry ecology glaciology geology astronomy space technology computer technology mathematics etc Major international meetings have called for interaction of such geo science disciplines to solve real world problems To move beyond the rhetorical level the NATO Special Programme on Global Transport Mechanisms in the Geo Sciences whose activities started in 1983 decided to organise his closing symposium on such a topic which focus on the relationship between climate and geo sciences This symposium was held at the end of May 1988 at the Universite Catholique de Louvain Louvain la Neuve Belgium One hundred and thirty participants from the 16 NATO countries and a number of non NATO countries assembled for the Symposium Another feature was the attendance by special invitation of 16 promising young scientists who might well become leading scientists on climate and geo sciences in their respective countries in the next century *Neptune's Domain* Martin Ira Glassner, 2024-05-01 First published in 1990 Neptune's Domain is organized around one unifying theme the geographic aspects of the new Law of the Sea as expressed primarily in the United Nations Convention on the Law of the Sea The first two chapters provide essential background information Chapters 3 through 9 explain relevant provisions of the Convention The next two chapters cover topics excluded from the Convention and the last three chapters are more analytical and future oriented All students and scholars concerned with the human use of the marine environment will welcome this book whether they be geographers political scientists or lawyers **Arctic Alternatives** Franklyn Griffiths, 1992-09-15 This book in itself is testimony to transition in the affairs of the north circumpolar region Written in 1988 and updated in 1990 the papers assembled here have been overtaken by events Non military or civil requirements thus seemed to warrant a new and far more important place in our understanding of security It is appropriate to explore not only the potential of civil cooperation in countering the force of militarism but the utility of a comprehensive conception of Arctic security This book will look at how these views fare once we've had a look at the region and its problems *State*, 1988
