## ПРЕДИСЛОВИЕ

Постоянное внимание партии и правительства к сыродельной отрасли промышленности, считающейся одной из основных продуктов питания, позволяет непрерывно совершенствовать технологию сыров и развивать сыродельную базу сыроделия в стране. В результате за короткий исторический период Советский Союз вышел на производственную высоту второго места в мире.

Продовольственная программа СССР, которая занимает центральное место в планах развития страны, предусматривает и в дальнейшем ускоренное развитие сыродельной промышленности.

Сыроделье возникло, как только человек научился доить домашних животных. В оставшейся, большей части, сыроделье молоко по окончании бактериальной фазы превращалось в свернутое молоко и ферментация составляла частью его молочнокислого микроокисления. Образовавшийся створок створаивался и отделялся от сыворотки. Славян сыворотку, человек получал простейший сыр. Слово «курт», которое использовалось, очевидно, для обозначения этого сыра, можно встретить в различных языках.

Никогда раньше, молочнокислые сычалы, что получение молока, а следовательно, и его простейшая переработка на сыр были известны человеку 6,5—5 тысяч лет до н. э. С тех пор, с каждым истощением спелости сыра получали все большее распространение, рассматривались как один из важнейших продуктов питания и применялись во всех южных районах и устьях южного сыра. До XIX в. сыроделье почти целиком зависело от местных условий. Состав коров и породы домашних животных обуславливали свойства, биологический и микробиологический состав молочного сыра, а климатические условия и традиции в технологии определяли, какими будут сыры, изготовленные в конкретной местности. Так появились и сохранили свои отличительные признаки сыры антитальской, гюлда, швейцарской, голландской крупной, стальной, рошфор, камамбер, латвийской, чеддер, пармезан, сулугуни, грузинский, чизик и многие другие.

В прошлом сыроделье сыродели стало терять локальный характер. Эксперты выявили важность прежде всего необходимость искусственного культивирования смеси молочнокислых микроорганизмов определенного состава, а также выбора молочного сыра с определенными свойствами и составом.

В XX в. появилась возможность управлять процессами получения молока с помощью биологических и технологических возбудителей, выращивать и контролировать специально бактериальные закваски, осуществлять разнообразные физико-химические и биологические процессы обработки сыра, а также производить продукты. В результате появилось большое количество видов различных сыров. В настоящее время ассортимент сыров, считающийся более 500 наименований, продолжает увеличиваться.

Постоянное внимание потребителей к сыру можно объяснить его высокой биологической ценностью, широким гаммой вкусовых оттенков и способностью длительно храниться. Следует отметить, что в последние десятилетия получил широкое подтверждение тот факт, что образующиеся при сыроделье сыры короткого созревания из закваски — ацидофильные — имеют такую же биологическую активность, как закваски в сыровых.

Наряду с сыром огромную популярность у населения находят также творог и сыровый-сырочный изделия. Производство их составляет около трети тонн и может рассматриваться вместе с выпуском кисломолочных продуктов как важный технико-экономический и культурный аспект производства сыров.
