The Militarization of European Space Policy Thomas Hoerber, Iraklis Oikonomou, 2023-10-30 This book is focused on militarization as the nucleus of EU space policy and the interrelatedness of European security industrial competitiveness and military capabilities in the shaping of this policy The EU and key member states have increasingly joined the US China and Russia among others

in regarding space assets as critical military as well as economic industrial and technological enablers This book tackles this issue by first shedding light on the military aspects of EU space policy with special emphasis on the security and defence dimensions of projects such as Galileo Copernicus Space Situational Awareness and Satellite Communication In this context contributors confront the empirical aspect of developments including the role of different institutional actors and the involvement of specific member states Further the volume analyses the discursive ideological normative and theoretical foundations of the use of space by the EU for strategic purposes drawing on the broad spectrum of European integration International Relations theory Last but not least the volume discusses initiatives outside the EU by key global space players with an emphasis on the US and transatlantic space relations All chapters maintain a solid empirical foundation in the form of geographical or issue related focus with an area specific emphasis on the EU as a whole transatlantic relations the policies of key member states such as France and Italy and core space powers such as the US China and India This book will be of much interest to students of space power security studies European politics and International Relations

Apollo in the Age of Aquarius Neil M. Maher, 2017-03-27 Winner of the Eugene M Emme Astronautical Literature Award A Bloomberg View Must Read Book of the Year A Choice Outstanding Academic Title of the Year A substance rich original on every page exploration of how the space program interacted with the environmental movement and also with the peace and Whole Earth movements of the 1960s Tyler Cowen Marginal Revolution The summer of 1969 saw astronauts land on the moon for the first time and hippie hordes descend on Woodstock This lively and original account of the space race makes the case that the conjunction of these two era defining events was not entirely coincidental With its lavishly funded mandate to put a man on the moon the Apollo mission promised to reinvigorate a country that had lost its way But a new breed of activists denounced it as a colossal waste of resources needed to solve pressing problems at home Neil Maher reveals that there were actually unexpected synergies between the space program and the budding environmental feminist and civil rights movements as photos from space galvanized environmentalists women challenged the astronauts boys club and NASA s engineers helped tackle inner city housing problems Against a backdrop of Saturn V moonshots and Neil Armstrong s giant leap for mankind *Apollo in the Age of Aquarius* brings the cultural politics of the space race back down to planet Earth As a child in the 1960s I was aware of both NASA s achievements and social unrest but unaware of the clashes between those two historical currents Maher captures the maelstrom of the 1960s and 1970s as it collided with NASA s program for human spaceflight George Zamka Colonel USMC Ret and former NASA astronaut NASA and Woodstock may now seem polarized but this illuminating original chronicle traces multiple crosscurrents between them Nature

[Learning Space](#) Jeremy Delamarter, 2025-01-13 As a genre science fiction is uniquely suited for highlighting and modeling the basic tenets of critical pedagogy that branch of educational philosophy and theory devoted equally to 1 exposing the hidden power structures embedded in educational practice and 2 articulating equitable and sustainable alternatives The science fiction novum that is the technological or

scientific newness found within the text serves as a catalyst not only within the textual universe but also potentially within the universe of the reader. New questions arise. Previously hidden beliefs come to light. Tacit assumptions are exposed. The unfamiliar nova of science fiction can lead to new interrogations of our own all too familiar surroundings, causing us to see our previously unquestioned worlds in a new way. These new understandings are at the heart of critical pedagogy. The learning spaces within science fiction texts can expose the fault lines within the educational structures of the real world. Questions about what it means to be human, about the proper limits of technological power, or about the relationships and obligations of one species to another have profound implications for 21st century educators and learners, particularly those who are interested in creating just and equitable learning spaces.

Learning Space: Exploring Critical Pedagogy through Science Fiction draws on popular science fiction stories to provide current and future educators with the language, concepts, vocabulary, and practices to cast a critical lens upon their own learning spaces and their own pedagogical practices. For example, a critical examination of the way that Yoda trains Luke Skywalker in *The Empire Strikes Back* reveals a great deal about the insidious nature of deficit thinking, assuming that students learn best when they empty their minds and remain passive. The assumed hierarchical power structure between teacher and student and the assumed relationship between learners and the knowledge with which they are supposed to be filled—all of these are called into question when viewed through a critical lens. The more we recognize the injustice in Yoda's pedagogy, the more we might begin to see it in our own. Similarly, Isaac Asimov's classic *Foundation* trilogy imagines a world in which mathematical modeling and statistical computation are used not only to predict what people might do but instead to determine what they should do. This kind of algorithmic determinism is unfortunately common in contemporary education, and yet far too few educators and learners recognize just how much of their own agency has been given over to the machines. By highlighting the algorithmic inequities in the world of Asimov's text, we begin to recognize similar inequities at play in our own world. Ultimately, this book uses science fiction to highlight educational inequities in such wide-ranging topics as standard English literary canons, machine learning, notions of academic dishonesty, epistemicide, inequitable school discipline, and more. More importantly, however, it provides a framework for moving forward, giving current and future educators the critical knowledge and skills both to recognize pedagogical injustice and to create viable, just, and sustainable alternatives.

A Techno-Economic History of the Conquest of Space Andrea Pomella, 2025-07-14. Uncover the intricate dynamics shaping the space economy. This pioneering work explores the historical economic and technological forces that have driven humanity's ventures into space, from the Space Race to the emergence of private aerospace giants. It provides an in-depth analysis of how innovation, policy, and market dynamics intersect to create opportunities and challenges in the rapidly evolving space sector. Highlighting the rise of global technology hubs like Silicon Valley and Europe's aerospace districts, the book analyses their pivotal role in fostering investment and groundbreaking developments. By blending historical context with forward-looking insights, it offers

a unique perspective on the hybrid collaboration between public institutions and private enterprises shaping the future of space exploration Designed for historians economists and industry professionals this accessible and engaging text investigates the socio economic implications of space capitalism It invites readers to explore the profound ways technological innovations and geopolitical factors are redefining our understanding of economic systems and humanity s reach beyond Earth

Spaceflight in the Shuttle Era and Beyond Valerie Neal,2017-06-27 An exploration of the changing conceptions of the Space Shuttle program and a call for a new vision of spaceflight The thirty years of Space Shuttle flights saw contrary changes in American visions of space Valerie Neal who has spent much of her career examining the Space Shuttle program uses this iconic vehicle to question over four decades worth of thinking about and struggling with the meaning of human spaceflight She examines the ideas images and icons that emerged as NASA Congress journalists and others sought to communicate rationales for or critiques of the Space Shuttle missions At times concurrently the Space Shuttle was billed as delivery truck and orbiting science lab near Earth station and space explorer costly disaster and pinnacle of engineering success The book s multidisciplinary approach reveals these competing depictions to examine the meaning of the spaceflight enterprise Given the end of the Space Shuttle flights in 2011 Neal makes an appeal to reframe spaceflight once again to propel humanity forward Neal may be the one person who knows the space shuttle program better than the astronauts who flew this iconic vehicle Her book casts new light on the program exploring its cultural significance through a thoughtful analysis As one who lived this history I gained much from her broader perspective and deep insights Kathryn D Sullivan retired NASA astronaut and former Administrator of the National Oceanic and Atmospheric Administration A much needed look at how to create a cultural narrative for human spaceflight that resonates with millennials rather than the Apollo generation Quite valuable Marcia Smith Editor SpacePolicyOnline com

Media, NASA, and America's Quest for the Moon Harlen Makemson,2009 When Apollo 11 landed on the moon in July 1969 it capped not only the most remarkable engineering feat in history but also a decade long battle over how much access the press and public should have to the manned space program Now forty years after an awed world watched Neil Armstrong and Buzz Aldrin bounce across the surface of the moon this book tells the behind the scenes story of how NASA and the U S media were often at odds but ultimately showed extraordinary cooperation in bringing the story of lunar conquest to the world Drawing upon rich historical sources from NASA journalists and television networks this book sheds new light on how media shaped how we saw America s great adventure in space and raises contemporary questions about the role of information in a free society
