**Figure 6:** Physical, technical, tactical, and psychological elements are sources available to evaluate. Using the demonstration helps find individual, group, and team attribution to performance rate. Professional players' measurement could monitor a performance and rank players to the A, B, and group and team to the A or error categories. The utilization of this style can affect youth progression, and the management should apply it differently due to the development process.

*Space Research: Physical and Technical Principles* Mikhail Galaktionovich Kroshkin, 1972 Experimental data on the space around the Earth and interplanetary space based mainly on rocket and satellite observations are presented First the basic physical parameters of the medium or phenomena are considered and then the parameters of phenomena which since they are dependent to some degree on the basic ones have in turn a corresponding influence on others Characteristics which are completely independent of or only slightly dependent on the others and thus do not affect them are described The results of a study of the effects which specific conditions in space have on the materials structural elements and systems of spacecraft are presented Scientific and Technical Aerospace Reports, 1981 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA

NRC in its 2002 report *The Sun to the Earth and Beyond* which did not reflect the new exploration goals would be affected. As a result NASA requested the NRC to review the role solar and space physics should play in support of the new goals. This report presents the results of that review. It considers solar and space physics both as aspects of scientific exploration and in support of enabling future exploration of the solar system. The report provides a series of recommendations about NASA's Sun Earth Connections program to enable it to meet both of those goals. Life and Physical Sciences Research for a New Era of Space Exploration National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2010-08-23. In response to requests from Congress NASA asked the National Research Council to undertake a decadal survey of life and physical sciences in microgravity. Developed in consultation with members of the life and physical sciences communities the guiding principle for the study is to set an agenda for research for the next decade that will allow the use of the space environment to solve complex problems in life and physical sciences so as to deliver both new knowledge and practical benefits for humankind as we become a spacefaring people. The project's statement of task calls for delivery of two books: an interim report and a final survey report. Although the development of specific recommendations is deferred until the final book this interim report does attempt to identify programmatic needs and issues to guide near term decisions that are critical to strengthening the organization and management of life and physical sciences research at NASA. *Cyber-Physical-Social Intelligence* Hai Zhuge, 2020-11-12. This book explores next generation artificial intelligence based on the symbiosis between humans, machines and nature including the rules and emerging patterns of recognition and the integration and optimization of various flows through cyberspace, physical space and social space. It unveils a reciprocal human-machine-nature symbiotic mechanism together with relevant rules on structuring and evolving reality and also proposes a multi-dimensional space for modelling reality and managing the methodologies for exploring reality. As such it lays the foundation for the emerging research area cyber-physical-social intelligence. Inspiring researchers and university students to explore the development of intelligence and scientific methodology it is intended for researchers and broad readers with a basic understanding of computer science and the natural sciences. Next generation artificial intelligence will extend machine intelligence and human intelligence to cyber-physical-social intelligence rendered by various interactions in cyberspace, physical space and social space. With the transformational development of science and society a multi-dimensional reality is emerging and evolving leading to the generation and development of various spaces obeying different principles. A fundamental scientific challenge is uncovering the essential mechanisms and principles that structure and evolve the reality emerging and evolving along various dimensions. Meeting this challenge requires identifying the basic relations

between humans machines and nature in order to reveal the cyber physical social principles      **Report of the Workshop
