Walking in the European City Dr Evrick Brown, Dr Timothy Shortell, 2014-05-28 Sociologists have long noted that dynamism is an essential part of the urban way of life However walking as a significant social activity and crucial research method in spite of its ubiquity as part of urban life has often been overlooked Bringing together new research on sites across Europe *Walking in the European City* addresses the nature of everyday mobility in contemporary urban settings shedding light not only on the ways in which walking relates to other social institutions and practices but also as a method for studying urban life **Sky Walking** Tom Jones, 2016-12-20 A gripping first hand account of life in space and the making of an astronaut What is it like to fly the space shuttle and work on and in the International Space Station Veteran NASA astronaut Tom Jones is uniquely qualified to give the details he flew four shuttle missions and led three space walks to deliver the US

Lab to the Station From B 52 pilot during the Cold War to a PhD in planetary science to the unbelievable rigors of astronaut training his career inevitably pointed him toward the space shuttle Until the Challenger exploded Jones's story is the first to candidly explain the professional and personal hardships faced by the astronauts in the aftermath of that 1986 tragedy He certainly has The Right Stuff but also found himself wondering if the risks he undertook were worth the toll on his family Liftoffs were especially nerve wracking his mother who refuses to even get on a plane cannot watch but his 53 days in space were unforgettable adventures Jones uses his background as a scientist to explain the practical applications of many of the shuttle's scientific missions and describes what it's like to work with the international crews building and living aboard the space station Tom Jones returned from his space station voyage to assess the impact of the 2003 Columbia tragedy and prescribes a successful course for the U S in space Stunning photographs many taken in space illustrate his amazing journey

Spatial Cognition VII Christoph Hölscher, Thomas F. Shipley, Marta Olivetti Belardinelli, John A Bateman, Nora S. Newcombe, 2010-07-30 This is the seventh volume of a series of books on fundamental research in spatial cognition As with past volumes the research presented here spans a broad range of research traditions for spatial cognition concerns not just the basic spatial behavior of biological and artificial agents but also the reasoning processes that allow spatial planning across broad spatial and temporal scales Spatial information is critical for coordinated action and thus agents interacting with objects and moving among objects must be able to perceive spatial relations learn about these relations and act on them or store the information for later use either by themselves or communicated to others Research on this problem has included both psychology which works to understand how humans and other mobile organisms solve these problems and computer science which considers the nature of the information available in the world and a formal consideration of how these problems might be solved Research on human spatial cognition also involves the application of representations and processes that may have evolved to handle object and location information to reasoning about higher order problems such as displaying non spatial information in diagrams Thus work in spatial cognition extends beyond psychology and computer science into many disciplines including geography and education The Spatial Cognition conference offers one of the few forums for consideration of the issues spanning this broad academic range
