Space Settlements A Design Study:

Space Settlements Richard D. Johnson, Charles H. Holbrow, 1977 *Space Settlements* N. A. S. A., Gerard K. O'Neill, 2004-11 This report grew out of a 10 week program in engineering systems design held at Stanford University and the Ames Research Center of the National Aeronautics and Space Administration during the summer of 1975 The project brought together nineteen professors of engineering physical science social science and architecture and two co directors This group worked for ten weeks to construct a convincing picture of how people might permanently sustain life in space on a large scale The goal of the summer study was to design a system for the colonization of space This report like the design itself is intended to be as technologically complete and sound as it could be made in ten weeks but it is also meant for a readership beyond that of the aerospace community Because the idea of colonizing space has awakened strong public interest the report is written to be understood by the educated public and specialists in other fields It also includes considerable background material The technical director Gerard K O Neill of Princeton University made essential contributions by providing information based on his notes and calculations from six years of prior work on space colonization and by carefully reviewing the technical aspects of the study **Space Settlements** Richard D. Ettington, 2022-07-22 *Designing Building Space Colonies A Blueprint for the Future* One of the greatest adventures in the future of humanity will be to construct work and live in space based structures In this book we look at the history of ideas for living in space proposed space colony designs and technology The details of current life support technology on the International Space Station is reviewed and what technologies will be required for development of large scale space colonies What other things in terms of financing and materials availability will be needed also Finally we conclude with some recommendations to get us ready to build these colonies *NASA Activities* ,1979 **Space Resources: Materials** ,1992 **Space Resources: Scenarios** ,1992 **Space Resources: Energy, power, and transport** ,1992 *Deep-Space Probes* Gregory Matloff, 2000-10-31 This expert guide written by a major figure at the NASA Marshall Spaceflight Center presents an authoritative and comprehensive survey of the present day state of the art in the field of extrasolar and interstellar space exploration focusing on the most promising techniques It looks at potential missions and explores the many exciting ideas being developed to probe the planets and nearby stars for signs of life Because of the tremendous current interest in the search for extrasolar life and extraterrestrial intelligence this is a timely and illuminating survey **Routledge Handbook of Space Policy** Thomas Hoerber, Mariel Borowitz, Antonella Forganni, Bruno Reynaud de Sousa, 2024-12-30 This volume offers a comprehensive overview of the field of space policy Space is a technology driven domain and policy development has accelerated in recent years at a time when the space economy has begun to show remarkable potential Thus this handbook gathers experts from different fields with the aim of 1 offering an overview of the

state of play regarding space policy issues and 2 expanding knowledge about possible future developments Given the cross disciplinary nature of the subject and its vast scope the authors contributions are grouped within different thematic sections as follows Theoretical structures for an understanding of space policies The history of space Society justice and the human impact Governance of space Popularisation of space New frontiers in space and expansion into the unknown World space policies by geographic areas The introduction and the conclusion chapters provide a coherent connection between the contributions with each section presenting transversal themes such as power dynamics and rules commercialisation sustainability militarisation applications and domestic use and justice This volume will be of much interest to students of space policy and power security studies and international relations From Antarctica to Outer Space Albert A. Harrison, Yvonne A. Clearwater, Christopher P. McKay, 2012-12-06 From Antarctica to Outer Space Life in Isolation and Confinement aims to revitalize and encourage behavioral research in spaceflight as well as in polar and comparable settings It comprises a broad collection of papers that evolved from presentations at a three day conference entitled The Human Experience in Antarctica Applications to Life in Space The Sunnyvale Conference This conference was co sponsored by the Division of Polar Programs of the National Science Foundation and the National Aeronautics and Space Administration and held in 1987 The book provides through firsthand accounts and research reviews an introduction to the human facet in isolated and confined environments such as Antarctica outer space submarines and remote national parks The book discusses some of the theoretical issues underlying research on isolated and confined people thus demonstrating the applicability of certain general theories of behavior It also focuses on basic psychological and social responses to isolation and confinement Studies whose primary purpose is to explore the effects of selection training and environmental design on human behavior and mission outcomes are discussed U.S. Government Books ,1985 *Deep Space Probes* Gregory L. Matloff, 2006-08-31 The Space Age is nearly 50 years old but exploration of the outer planets and beyond has only just begun Deep Space Probes Second Edition draws on the latest research to explain why we should explore beyond the edge of the Solar System and how we can build highly sophisticated robot spacecraft to make the journey Many technical problems remain to be solved among them propulsion systems to permit far higher velocities and technologies to build vehicles a fraction of the size of today s spacecraft Beyond the range of effective radio control robot vehicles for exploring deep space will need to be intelligent thinking craft able to make vital decisions entirely on their own Gregory Matloff also looks at the possibility for human travel into interstellar space and some of the immense problems that such journeys would entail This second edition includes an entirely new chapter on holographic message plaques for future interstellar probes a NASA funded project **Monthly Catalogue, United States Public Documents** ,1977-07 *Monthly Catalog of United States Government Publications* United States. Spacesuit Nicholas De Monchaux, 2011-03-18 How the twenty one layer Apollo spacesuit made by Playtex was a triumph of intimacy over engineering When Neil Armstrong and Buzz Aldrin stepped onto the lunar surface in July of 1969 they wore spacesuits made by Playtex twenty one layers of fabric each with a distinct yet interrelated function custom sewn for them by seamstresses whose usual work was fashioning bras and girdles This book is the story of that spacesuit It is a story of the triumph over the military industrial complex by the International Latex Corporation best known by its consumer brand of Playtex a victory of elegant softness over engineered hardness of adaptation over cybernetics Playtex s spacesuit went up against hard armor like spacesuits designed by military contractors and favored by NASA s engineers It was only when those attempts failed when traditional engineering firms could not integrate the body into mission requirements that Playtex with its intimate expertise got the job In *Spacesuit* Nicholas de Monchaux tells the story of the twenty one layer spacesuit in twenty one chapters addressing twenty one topics relevant to the suit the body and the technology of the twentieth century He touches among other things on eighteenth century androids Christian Dior s New Look Atlas missiles cybernetics and cyborgs latex JFK s carefully cultivated image the CBS lunar broadcast soundstage NASA s Mission Control and the applications of Apollo style engineering to city planning The twenty one layer spacesuit de Monchaux argues offers an object lesson It tells us about redundancy and interdependence and about the distinctions between natural and man made complexity it teaches us to know the virtues of adaptation and to see the future as a set of possibilities rather than a scripted scenario
