environment around the Earth and the atmosphere. They may even impact various social systems, communications, positioning, electric power supply, aviation, and activities in space. Such variations in the space environment which can influence human activities are called space weather. The space weather disaster caused by a solar explosion is a potential risk in modern society. To reduce and mitigate space weather impacts, it is essential to understand the structure and dynamics of the solar-terrestrial environment and to predict the variations. This book comprehensively describes space weather from the basics of related sciences to the possible social impacts. It was compiled based on a national research project on solar-terrestrial environment prediction conducted in Japan recently. It consists of four parts: the linkage between space weather and society, the magnetosphere of the Earth and space weather prediction, solar storms and space weather prediction, and long-term prediction of solar cycle activity and climate impacts. Each chapter covers the basics and applications of each area, which helps readers gain a broad understanding of the subject matter throughout the book. In addition, readers are able to select and read the topics they are most interested in. It is especially valuable for undergraduate and graduate students and young researchers studying space weather and related topics and is further helpful for experts in various industries related to space weather disasters. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. The present version has been revised technically and linguistically by the authors in collaboration with a professional translator.

The Cambridge History of Ireland: Volume 2, 1550-1730 Jane Ohlmeyer, 2018-03-31. This volume offers fresh perspectives on the political, military, religious, social, cultural, intellectual, economic, and environmental history of early modern Ireland and situates these discussions in global and comparative contexts. The opening chapters focus on Politics and Religion and War and offer a chronological narrative informed by the re-interpretation of new archives. The remaining chapters are more thematic, with chapters on Society, Culture, and Economy and Environment, and often respond to wider methodologies and historiographical debates. Interdisciplinary cross-pollination between, on the one hand, history and, on the other, disciplines like anthropology, archaeology, geography, computer science, literature, and gender and environmental studies informs many of the chapters. The volume offers a range of new departures by a generation of scholars who explain in a refreshing and accessible manner how and why people acted as they did in the transformative and tumultuous years between 1550 and 1730.

The Dynamic Sun A. Hanslmeier, Mauro Messerotti, Astrid Veronig, 2012-12-06. Our Sun is the nearest star and thus an ideal laboratory to study dynamic processes which are related to solar-terrestrial physics. The topics addressed in this book cover solar MHD and generation of acoustic waves as well as physical parameters that are suited to describing solar activity and could serve as proxies for space weather forecasting. The influence of solar activity, radiation, and solar wind on telecommunication systems, satellite missions, etc. is also discussed. In

short contribution reports are given on various topics in solar physics The book covers solar physics from the photosphere to space weather influences The intended level of readership is aimed at students working in this or related fields professionals and astronomers who wish to acquire some basic knowledge in the field of solar terrestrial relations which is provided in the review articles
