Scientific Autobiography, A: S Chandrasekhar Kameshwar C Wali, 2011-01-04 S Chandrasekhar popularly known as Chandra was one of the foremost scientists of the 20th century The year 2010 marks the birth centenary of Chandra His unique style of research inward bound seeking a personal perspective to master a particular field and then pass on to another was so unique that it will draw considerable interest and attention among scholars As Chandra elucidates in the preface The various installments describe in detail the evolution of my scientific work during the past forty years and records each investigation describing the doubts and the successes the trials and the tribulations And the parts my various associates and assistants played in the completion of the different investigations are detailed It is indeed a remarkable and rare document fascinating to read and experience the joys frustrations and struggles of a creative mind **Selected Papers,**

Volume 6 Subrahmanyan Chandrasekhar, 1991-04-09 This is the first of six volumes collecting significant papers of the distinguished astrophysicist and Nobel laureate S Chandrasekhar His work is notable for its breadth as well as for its brilliance his practice has been to change his focus from time to time to pursue new areas of research The result has been a prolific career full of discoveries and insights some of which are only now being fully appreciated Chandrasekhar has selected papers that trace the development of his ideas and that present aspects of his work not fully covered in the books he has periodically published to summarize his research in each area *From White Dwarfs to Black Holes* G.

Srinivasan, 2000-05-15 *From White Dwarfs to Black Holes* chronicles the extraordinarily productive scientific career of Subrahmanyan Chandrasekhar one of the twentieth century's most distinguished astrophysicists Among Chandrasekhar's many discoveries were the critical mass that makes a star too massive to become a white dwarf and the mathematical theory of black holes In 1983 he shared the Nobel Prize for Physics for these and other achievements Over the course of more than six decades of active research Chandrasekhar investigated a dizzying array of subjects G Srinivasan notes in the preface to this book that the range of Chandra's contributions is so vast that no one person in the physics or astronomy community can undertake the task of commenting on his achievements Thus in this collection ten eminent scientists evaluate Chandrasekhar's contributions to their own fields of specialization Donald E Osterbrock closes the volume with a historical discussion of Chandrasekhar's interactions with graduate students during his more than quarter century at Yerkes Observatory Contributors are James Binney John L Friedman Norman R Lebovitz Donald E Osterbrock E N Parker Roger Penrose A R P

 Jones,J.E. Jones,2012-12-06 The Origin and Evolution of Galaxies is the outstanding problem of modern cosmology
 Fortunately we have a firm cosmological framework on which to base our theories the hot big bang and recently there has
 been substantial progress in providing observations which potentially can constrain these theories The problem of galaxy
 formation is as a consequence one involving many diverse branches of physics and astrophysics It has been the aim of the
 school and this compendium of lectures and seminars to bring together these diverse aspects at a level enabling research
 workers to understand what is going on in other corners of the subject and to see how progress in each area impinges on the
 others We are grateful to the contributors to this volume for allowing us considerable editorial license with their articles We
 have attempted to provide a representative sample of the talks that were given at the school besides the texts of the invited
 lecturers It is regrettable that for reasons of space we have had to leave out a number of other contributions **Tenth**
