

# Spacetime Singularities and Invariance

O. Cristi Stoica\*

Iulian D. Toader†

## 1 Introduction

Spacetime singularities are an important topic in general relativity and in cosmology, but understanding their philosophical significance is rather a side-issue in contemporary debates in philosophy of physics. The prevailing attitude still seems to be that singularities constitute a breakdown of physical laws.<sup>1</sup> A notable exception to this rather unfortunate state of affairs is John Earman's book, *Bangs, Crunches, Whimpers, and Shrieks* (Earman, 1995), published 20 years ago, focused on issues related to the definition, proper characterization, and existence of singularities, as well as on several problems and hypotheses that they are thought to have given rise to. Proposing a tolerant attitude towards singularities, Earman discusses cosmic censorship, supertasks, and the horizon problem, among other issues. What we discuss in the present paper is a novel approach to singularities, based on a recent extension of general relativity that shows why singularities do not actually constitute a breakdown of physical laws: it is not only the case that physical laws are valid, but they also remain invariant at singularities (Stoica, 2013). We are interested here in describing this kind of invariance, as well as in drawing its consequences for our understanding of equivalence in general relativity. In particular, adopting a distinction recently introduced by Dennis Dieks (Dieks, 2006), we point out that the difference between the metrics at singularities and those outside of singularities is factual, rather than nomological, and that this justifies the extension of the principle of equivalence to singularities.

<sup>1</sup>See, e.g., this remark in a recent collection on the philosophy of general relativity: "If you think you have a singularity, then you can't use it in a physical model. You don't know how to include such an object in a physical system, either as the outcome of gravitational collapse or as an object that might affect other objects with its gravitational field. [...] you are paralyzed by incomprehension." (Schutz, 2012)
