Spanish America Vol.1 (of 2) Richard Henry Bonnycastle, In this enlightened age Geography has assumed a form so new and interesting that it has become the study as well as the amusement of all ranks of society the philosopher peruses with admiring attention the details of the localities of distant climes and the mere reader instructs as well as amuses himself in turning over the pages of a geographical performance This science which till very lately bore so low a rank in the scale of intellectual attainment has arisen by the exertions of men of genius and the increasing commerce of the Atlantic states of Europe to a proud elevation amid the numerous objects of scientific research in fact it blends itself so minutely with almost all of them that in order to acquire a thorough knowledge of it it is necessary to study the whole circle of the arts and sciences Philosophy enables the geographic traveller to account for the ever varying appearances of nature which meet his wondering sight Mathematical knowledge gives him the means of calculating with accuracy the positions and forms of the places which arrest his attention in his progress and with his apparatus of Astronomical instruments whether he be in distant Inde on the snow capped summits of the Cordillera of the Andes or in the frozen regions of the north he is still able to fix the exact route which he intends to follow Painting or rather its twin sister Drawing is also an acquirement absolutely necessary for the man of research in this science as by its assistance he can point out to his brethren the surprising features of those distant regions which it is their lot to hear of but never to see and by this delightful art which may well be ranked among the first of gifts to man he can bring home to the imagination the forms of things unknown Poetry is not without its share in assisting to give just notions of geographic details as by its fascinating aid the ideas which we form of distant objects are heightened and impressed on our memories and without the fellowship of History Geography would prove the most uninteresting of studies But there are other branches of philosophy which have of late given a form and stability to the pursuit of knowledge in this science and by whose powerful co operation the march of geographical acquisition is daily spreading over a wider and more noble field Chemistry has within the last century assumed a character so widely different

from its ancient bounds that the world is as it were a new region We have become acquainted with phenomena which were not before imagined to exist and we can trace the causes and consequently the effects of many of the operations of nature which had hitherto baffled all the efforts of man Geology Mineralogy and Oryctology have also as a consequence of the advanced state of chemical knowledge become so universally studied that no modern writer of travels ought to be unacquainted with at least their leading principles and to render his labours very acceptable to the public he should possess an accurate and extended knowledge of these branches of science Zoography has a close connection with the details of Modern Geography as without a description of the properties and forms of the various races of animals which all bounteous Providence has placed on the Earth for the sustenance or the use of man a mere outline of the features of kingdoms and states would be though not useless yet uninteresting Botany also takes an active part in the formation of works of this nature and perhaps no other science has a more pleasing share in such undertakings for every day and almost every hour discloses to the phytologist some new and singular variety of Nature s performance To be continue in this ebook

web coordinates of v the standard coordinates are v_3 are the $b_1 b_2$ are assumed if no other basis is specified this means $v = v_1 e_1 + v_2 e_2 + v_3 e_3$ if b_1, b_2, b_3 is a basis of \mathbb{R}^3 then the matrix S which contains the vectors b_k as column vectors is called the coordinate change matrix

web and now that we know what D is we can now solve for A we can now solve for the transformation matrix with respect to the standard basis so to do that we have to figure out C and C^{-1} so C remember C is just the change of basis matrix and all that is is the basis vectors it's just a matrix with the basis vectors in the column
